

Stanford CS224W: Machine Learning with Graphs

CS224W: Machine Learning with Graphs

Jure Leskovec, Stanford University

<http://cs224w.stanford.edu>

CS224W Course Logistics

- The class meets Tue and Thu 10:30-11:50am Pacific Time on Zoom.
 - Videos of the lectures will be recorded and posted on Canvas.
- Structure of lectures:
 - 60 minutes of a prerecorded lecture.
 - During this time we will be using Piazza Live Q&A
 - 20 minutes of a live Q&A session

Course Outline

Date	Topic	Date	Topic
Tue, Jan 12	Introduction; Machine Learning for Graphs	Tue, Feb 16	Reasoning over Knowledge Graphs
Thu, Jan 14	Traditional Methods for ML on Graphs	Thu, Feb 18	Frequent Subgraph Mining with GNNs
Tue, Jan 19	Node Embeddings	Tue, Feb 23	Community Structure in Networks
Thu, Jan 21	Link Analysis: PageRank	Thu, Feb 25	Traditional Generative Models for Graphs
Tue, Jan 26	Label Propagation for Node Classification	Tue, Mar 2	Deep Generative Models for Graphs
Thu, Jan 28	Graph Neural Networks 1: GNN Model	Thu, Mar 4	Scaling Up GNNs
Tue, Feb 2	Graph Neural Networks 2: Design Space	Tue, Mar 9	Learning on Dynamic Graphs
Thu, Feb 4	Applications of Graph Neural Networks	Thu, Mar 11	GNNs for Computational Biology
Tue, Feb 9	Theory of Graph Neural Networks	Tue, Mar 16	GNNs for Science
Thu, Feb 11	Knowledge Graph Embeddings	Thu, Mar 18	Industrial Applications of GNNs

Logistics: Website

- <http://cs224w.stanford.edu>
 - Slides posted before the class
- **Readings:**
 - [Graph Representation Learning Book](#) by Will Hamilton
 - Research papers
- **Optional readings:**
 - Papers and pointers to additional literature
 - **This will be very useful for course projects**

Logistics: Communication

- **Piazza Q&A website:**
 - <http://piazza.com/stanford/win2021/cs224w>
 - Register with your @stanford.edu email
 - **Please participate and help each other!**
 - Don't post code, annotate your questions, search for answers before you ask
 - Given COVID/virtual class, this will be the main mode of communication
- **To reach course staff (prof/TAs), always use:**
 - cs224w-win2021-staff@lists.stanford.edu
- We will post course announcements to Piazza (make sure you check it regularly)

Work for the Course & Grading

- **Final grade will be composed of:**
 - **Homework: 30%**
 - Homework 1, 2, 3, each worth 10%
 - **Coding assignment: 30%**
 - 5 Coding assignments using Google Colab, each worth 6%
 - **Course project: 40%**
 - Proposal: 30%
 - Final report: 70%
 - **Extra credit: Piazza participation, code contribution**
 - Used if you are on the boundary between grades

Homework, Write-ups

- **Assignments are long and take time (~10h)**
Start early!
 - A combination of data analysis, algorithm design, and math
 - Generally due on Thursdays 23:59 Pacific Time
- **How to submit?**
 - Upload via Gradescope (<http://gradescope.com>)
 - You will be automatically registered to Gradescope once you officially enroll in CS224W
 - Each answer must start on a new page.
Read carefully the course info page!
 - Both homework (including code) and project deliverables must be uploaded to Gradescope!
- **Total of 2 Late Periods (LP) per student:**
 - Max 1 late period per assignment (no LP for final report)

Honor Code

Make sure you read
and understand it!

- **We strictly enforce the Stanford Honor Code**
- Violations of the Honor Code include:
 - Copying or allowing another to copy from one's own paper
 - Unpermitted collaboration
 - Plagiarism
 - Giving or receiving unpermitted aid on a take-home examination
 - Representing as one's own work the work of another
 - Giving or receiving aid on an assignment under circumstances in which a reasonable person should have known that such aid was not permitted
- The standard sanction for a first offense includes a one-quarter suspension and 40 hours of community service.

Course Projects

- **Course project:**
 - Make predictions on a network dataset
- **Performed in groups of up to 3 students:**
 - Fine to have groups of 1 or 2. The team size will be taken under consideration when evaluating the scope of the project in breadth and depth. But 3 person teams can be more efficient.
 - Project is the **important work** for the class
 - Teaching staff will help with problems and data
 - More details to follow.
- **Read:** <http://cs224w.stanford.edu/info.html>

Course Schedule

Week	Assignment	Due on (11:59pm PT)
1	Colab 0	
1	Colab 1	Thu, Jan 28
2	Homework 1	Thu, Feb 4
3	Colab 2	Thu, Feb 11
	Project Proposal	Thu, Feb 11
4	Homework 2	Thu, Feb 18
5	Colab 3	Thu, Feb 25
6	Homework 3	Thu, Mar 4
7	Colab 4	Thu, Mar 11
8	Colab 5	Thu, Mar 18
	Project Report	Sun, Mar 21 (No Late Periods!)

Prerequisites

- **The course is self-contained.**
- **No single topic is too hard by itself.**
- **But we will cover and touch upon many topics and this is what makes the course hard.**
 - **Good background in:**
 - Machine Learning
 - Algorithms and graph theory
 - Probability and statistics
 - **Programming:**
 - You should be able to write non-trivial programs (in Python)

Graph Machine Learning Tools

- We use **PyTorch Geometric (PyG)**
- We further recommend:
 - **DeepSNAP**: Library that assists deep learning on graphs.
 - Flexible graph manipulation, standard data split pipeline, ...
 - **GraphGym**: Platform for designing Graph Neural Networks.
 - Modularized GNN implementation, simple hyperparameter tuning, flexible user customization
 - Both platforms are very helpful for the course project (save your time & provide advanced GNN functionalities)
- **Other network analytics tools:** SNAP.PY, NetworkX

Stanford CS224W: Machine Learning with Graphs

CS224W: Machine Learning with Graphs

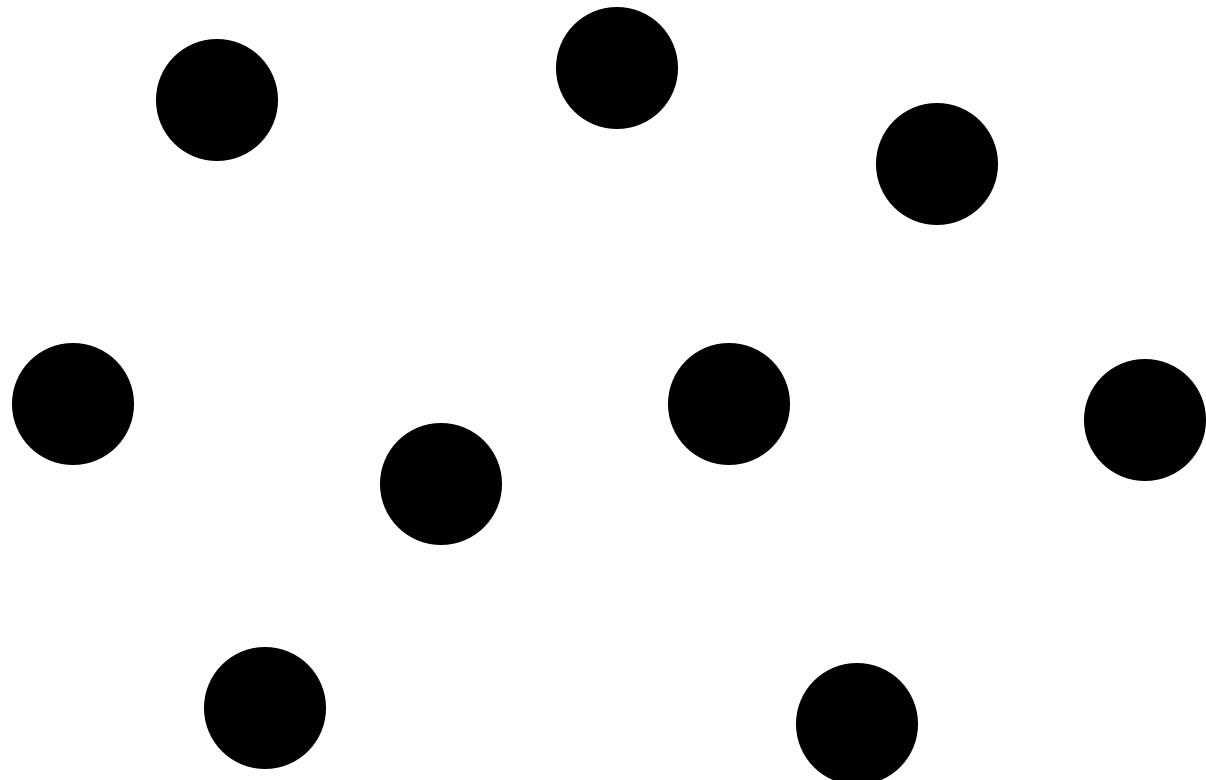

Jure Leskovec, Stanford University

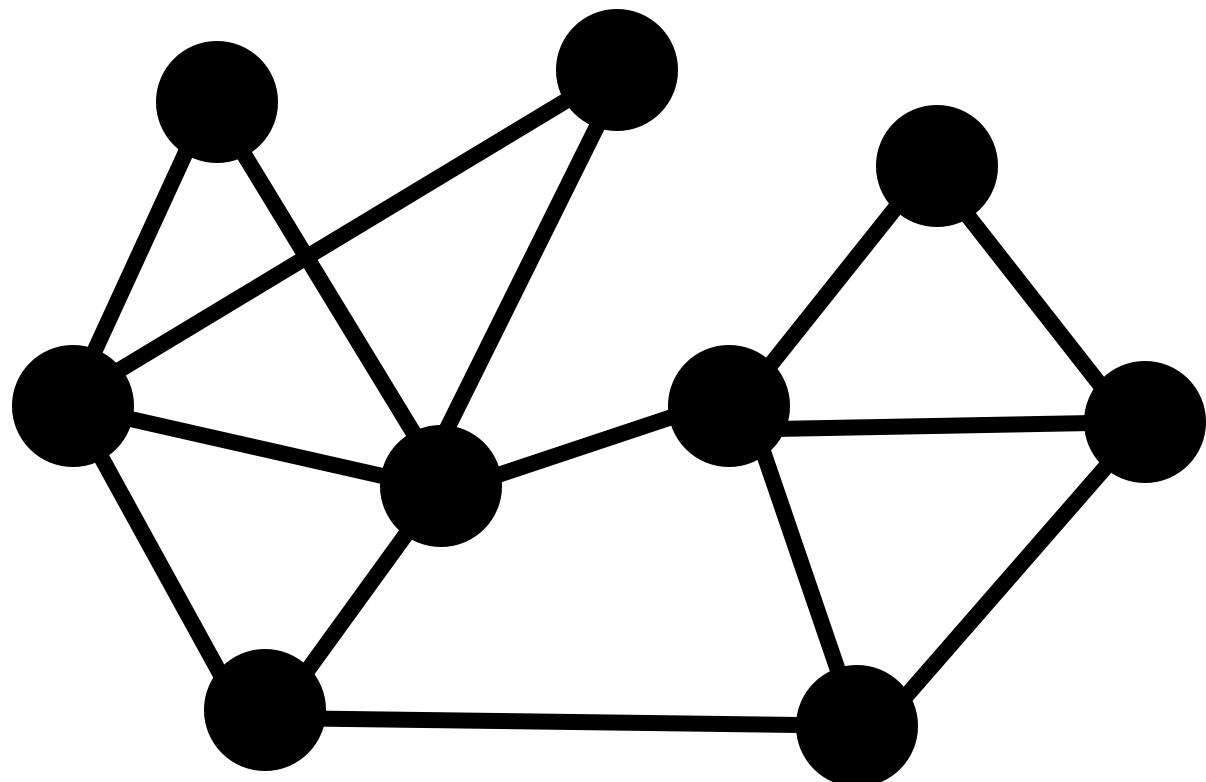

<http://cs224w.stanford.edu>

Why Graphs?

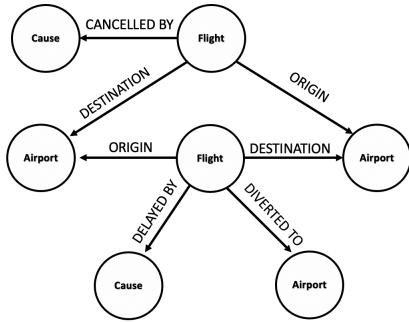

Graphs are a general language for describing and analyzing entities with relations/interactions

Graph

Many Types of Data are Graphs (1)

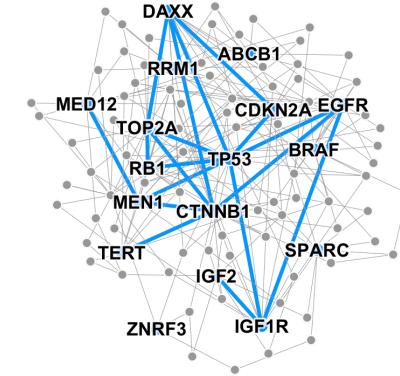

Event Graphs

Knowledge Graphs

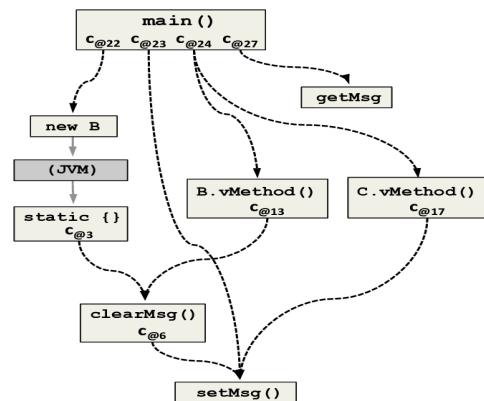

Image credit: ResearchGate

Code Graphs

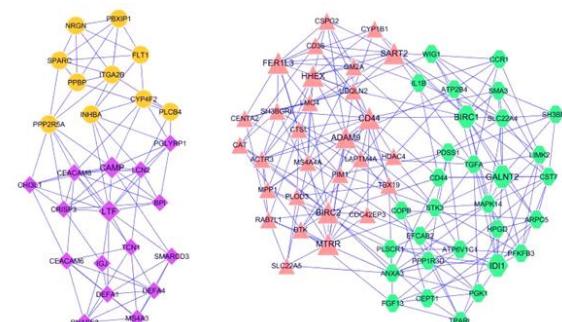

Image credit: ese.wustl.edu

Regulatory Networks

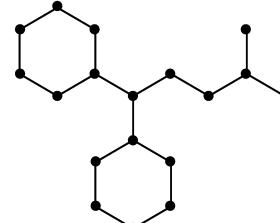

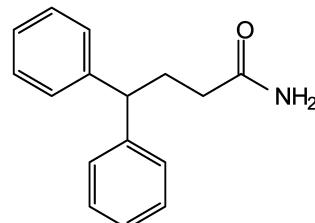

Image credit: MDPI

Molecules

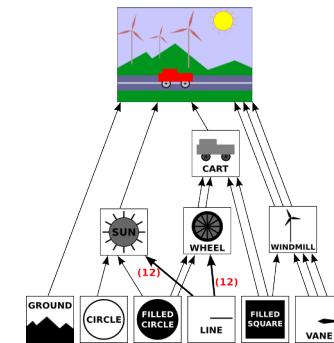

Image credit: math.hws.edu

Scene Graphs

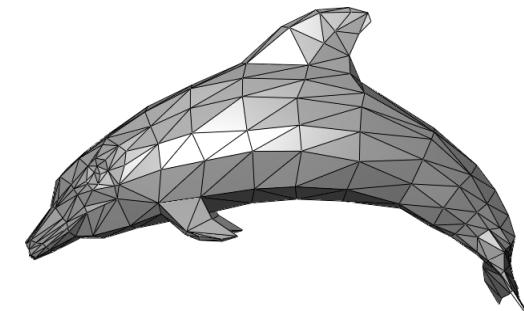

Image credit: Wikipedia

3D Shapes

Types of Networks and Graphs

- **Networks (also known as Natural Graphs):**
 - **Social networks:**
 - Society is a collection of 7+ billion individuals
 - **Communication and transactions:**
 - Electronic devices, phone calls, financial transactions
 - **Biomedicine:**
 - Interactions between genes/proteins regulate life
 - **Brain connections:**
 - Our thoughts are hidden in the connections between billions of neurons

Types of Networks and Graphs

- **Graphs (as a representation):**
 - **Information/knowledge** are organized and linked
 - **Software** can be represented as a graph
 - **Similarity networks:** Connect similar data points
 - **Relational structures:** Molecules, Scene graphs, 3D shapes, Particle-based physics simulations

**Sometimes the distinction between
networks & graphs is blurred**

Graphs and Relational Data

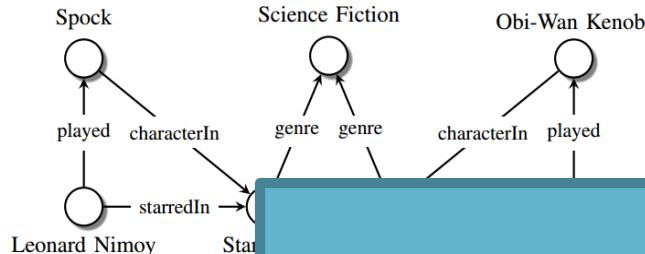

Image credit
Know

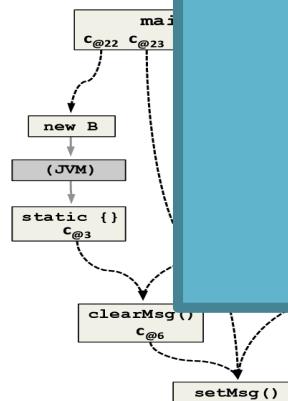

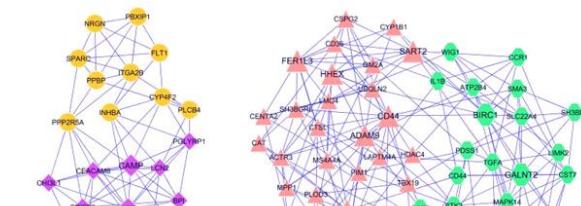

Image credit: [ResearchGate](#)

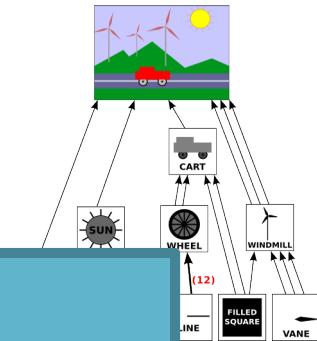

Code Graphs

Main question:

How do we take advantage of relational structure for better prediction?

Image credit: MDPI

ath.hws.edu

Graphs

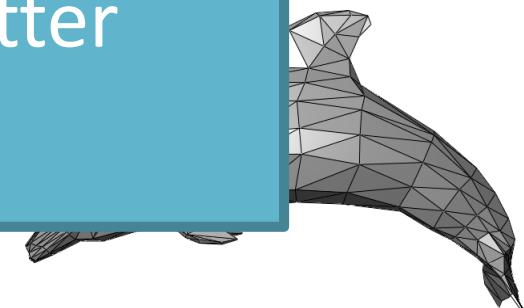

Image credit: Wikipedia

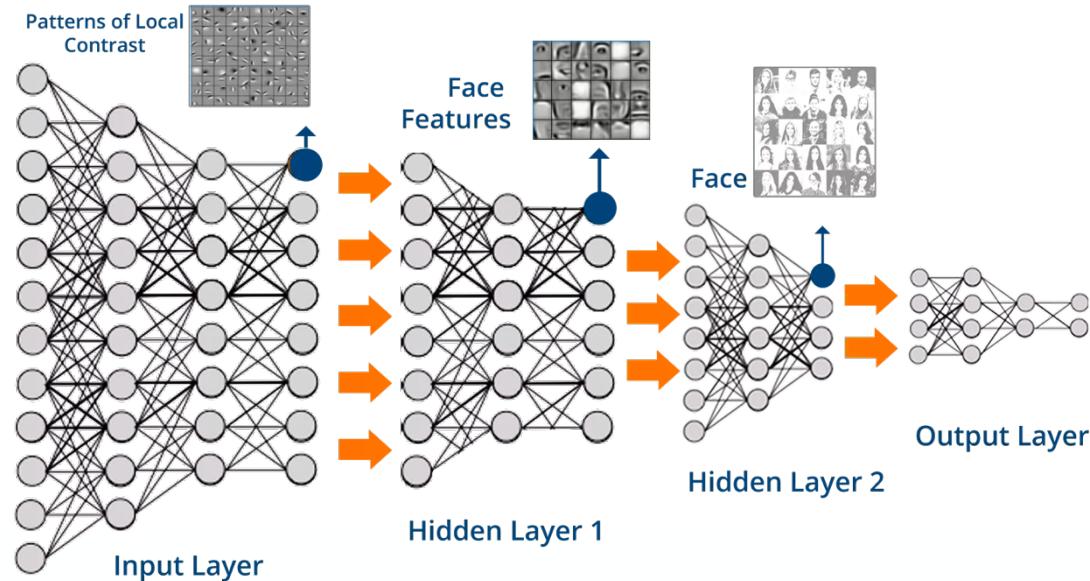

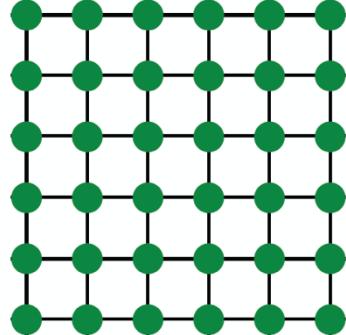

3D Shapes

Graphs: Machine Learning

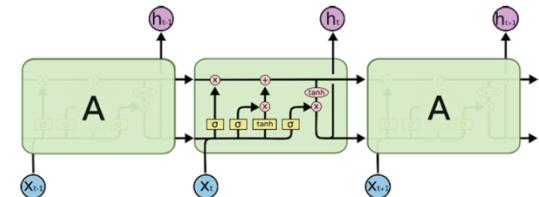

Complex domains have a rich relational structure, which can be represented as a **relational graph**

By explicitly modeling relationships we achieve better performance!

Modern ML Toolbox

Text/Speech

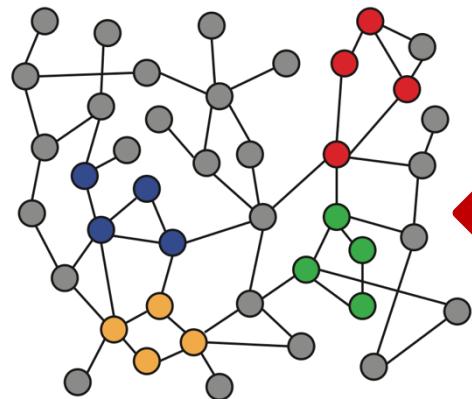

Modern deep learning toolbox is designed
for simple sequences & grids

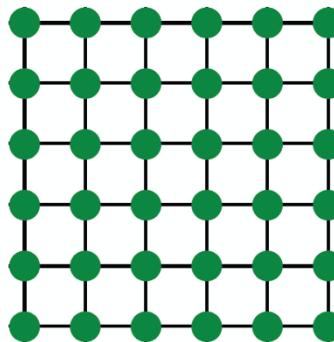

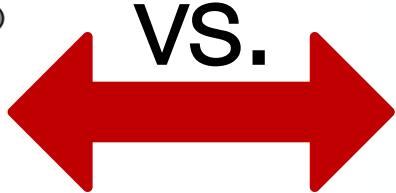

Why is it Hard?

Networks are complex.

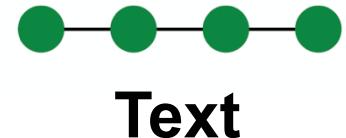

- Arbitrary size and complex topological structure (*i.e.*, no spatial locality like grids)

Networks

Images

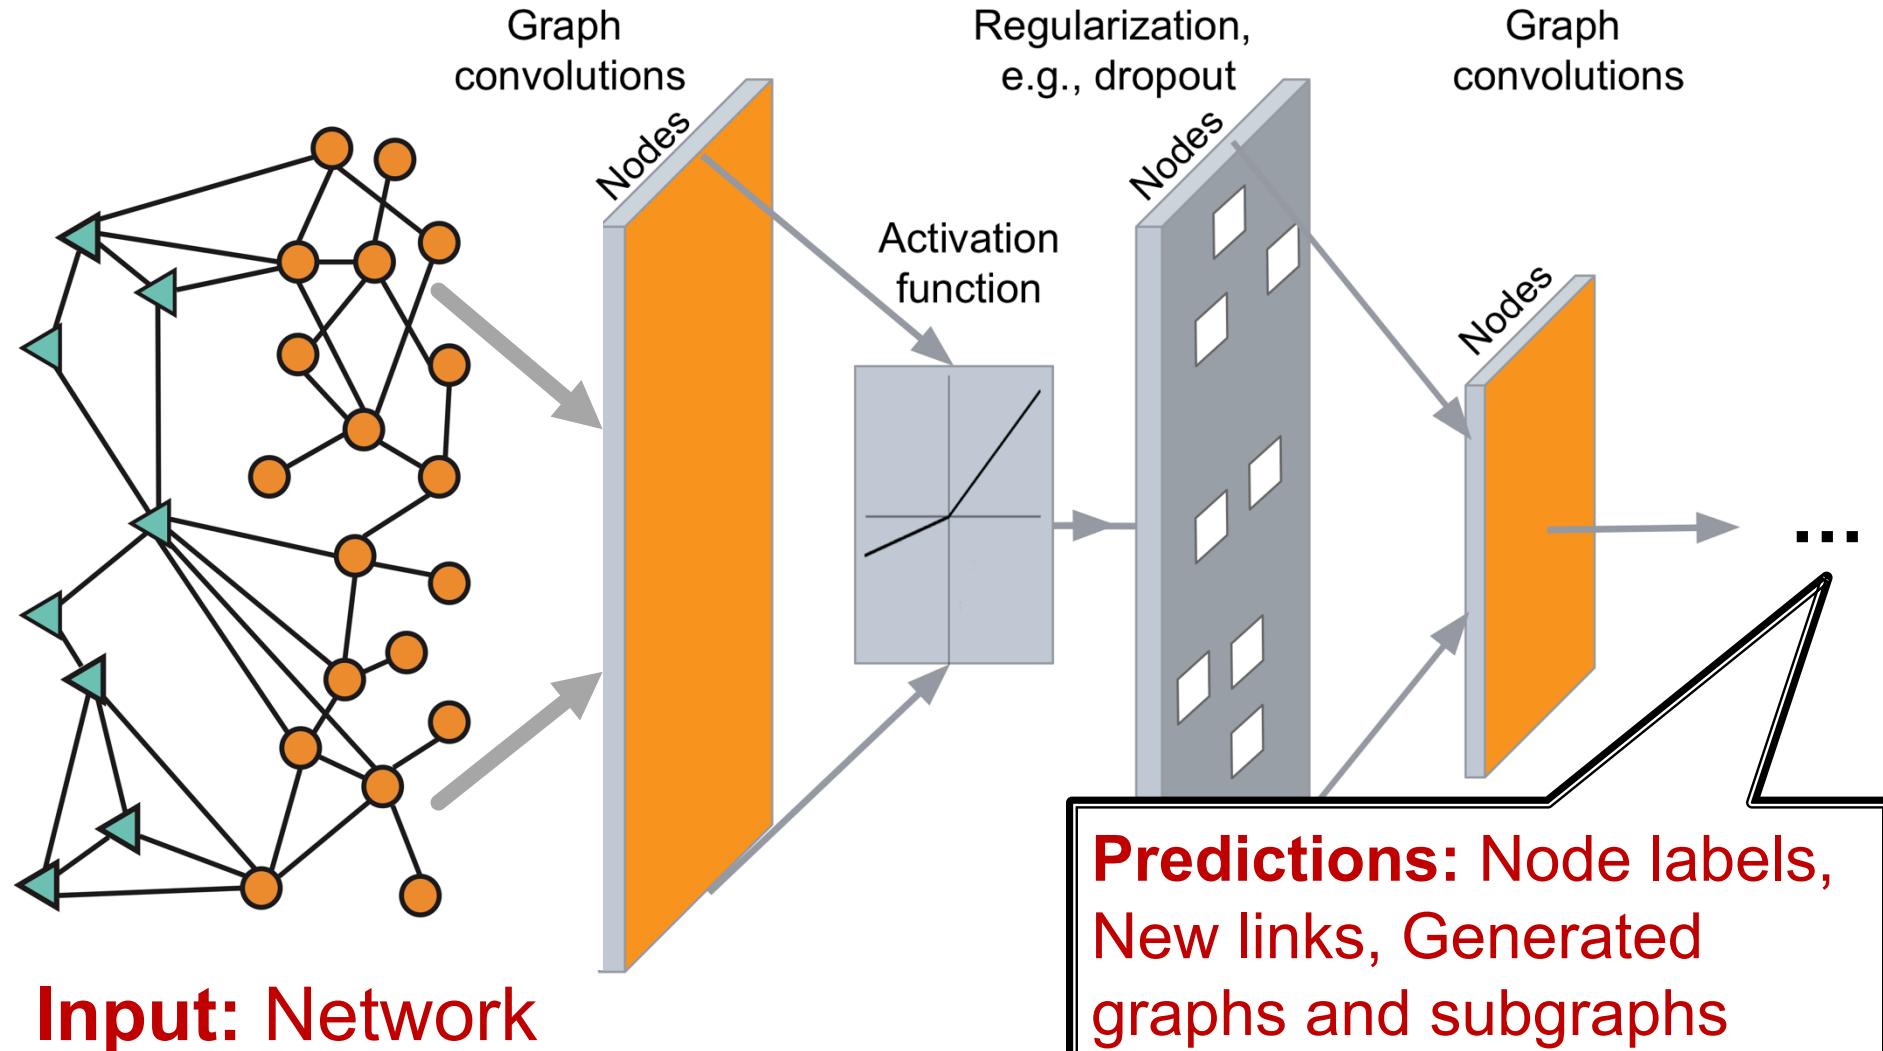

- No fixed node ordering or reference point
- Often dynamic and have multimodal features

This Course

How can we develop neural networks
that are much more broadly
applicable?

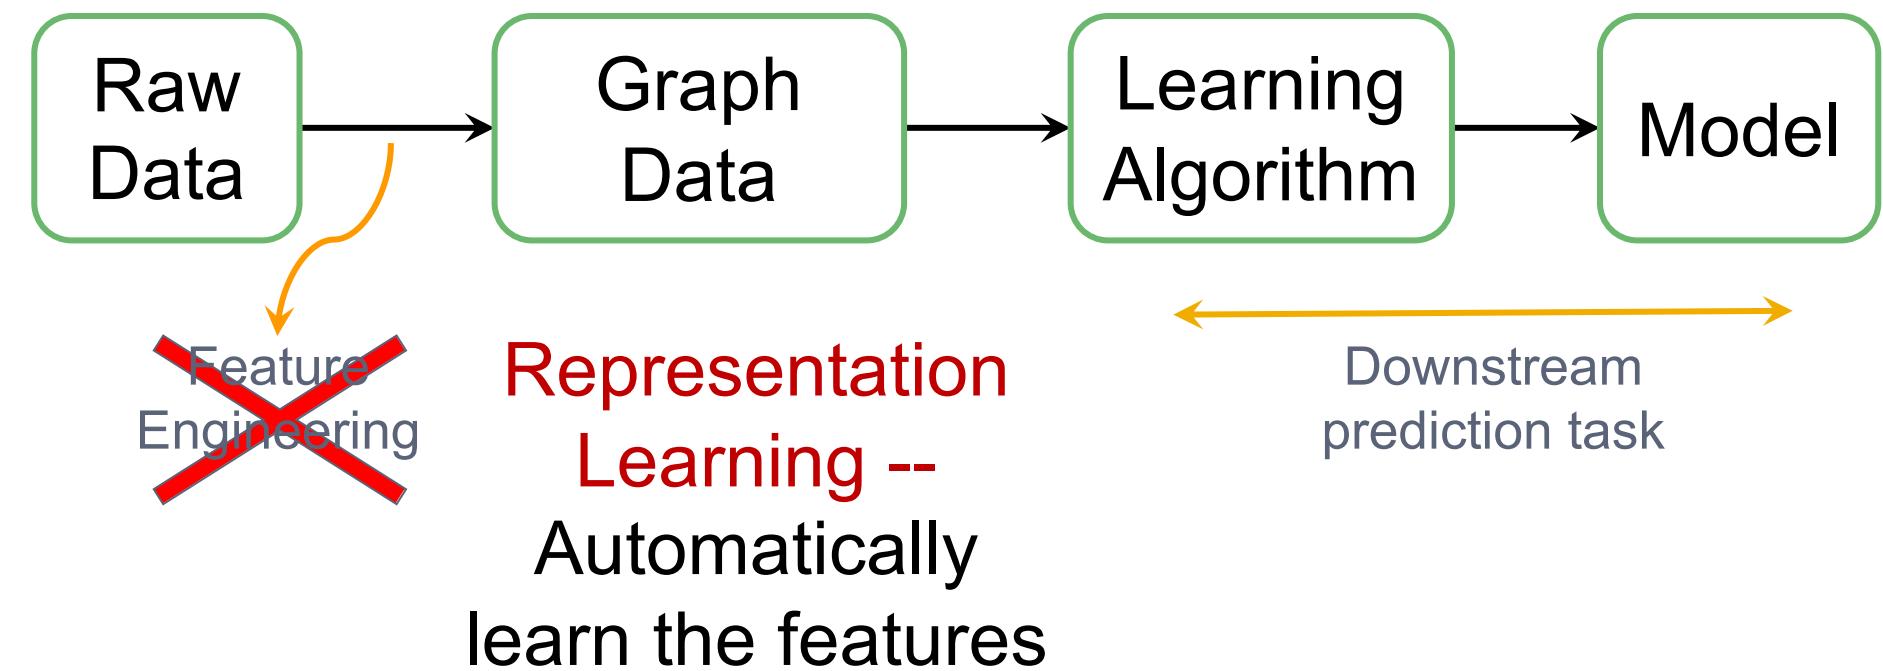

Graphs are the new frontier
of deep learning

CS224W: Deep Learning in Graphs

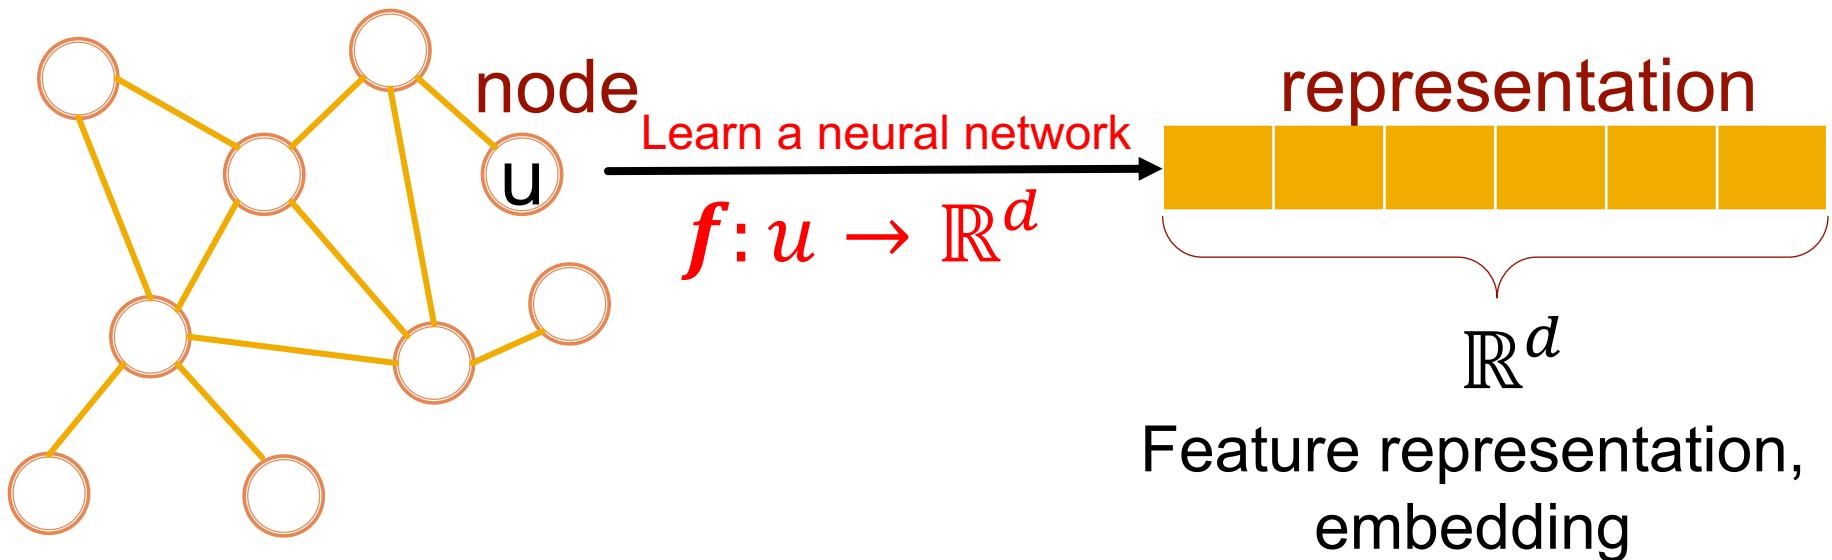

CS224W & Representation Learning

(Supervised) Machine Learning Lifecycle:
This feature, that feature. **Every single time!**

CS224W & Representation Learning

Map nodes to d-dimensional
embeddings such that similar nodes in
the network are **embedded close**
together

CS224W Course Outline

We are going to cover various topics in Machine Learning and Representation Learning for graph structured data:

- Traditional methods: Graphlets, Graph Kernels
- Methods for node embeddings: DeepWalk, Node2Vec
- Graph Neural Networks: GCN, GraphSAGE, GAT, Theory of GNNs
- Knowledge graphs and reasoning: TransE, BetaE
- Deep generative models for graphs
- Applications to Biomedicine, Science, Industry

Topics Covered in CS224W

Date	Topic	Date	Topic
Tue, Jan 12	Introduction; Machine Learning for Graphs	Tue, Feb 16	Reasoning over Knowledge Graphs
Thu, Jan 14	Traditional Methods for ML on Graphs	Thu, Feb 18	Frequent Subgraph Mining with GNNs
Tue, Jan 19	Node Embeddings	Tue, Feb 23	Community Structure in Networks
Thu, Jan 21	Link Analysis: PageRank	Thu, Feb 25	Traditional Generative Models for Graphs
Tue, Jan 26	Label Propagation for Node Classification	Tue, Mar 2	Deep Generative Models for Graphs
Thu, Jan 28	Graph Neural Networks 1: GNN Model	Thu, Mar 4	Scaling Up GNNs
Tue, Feb 2	Graph Neural Networks 2: Design Space	Tue, Mar 9	Learning on Dynamic Graphs
Thu, Feb 4	Applications of Graph Neural Networks	Thu, Mar 11	GNNs for Computational Biology
Tue, Feb 9	Theory of Graph Neural Networks	Tue, Mar 16	GNNs for Science
Thu, Feb 11	Knowledge Graph Embeddings	Thu, Mar 18	Industrial Applications of GNNs

Stanford CS224W: Applications of Graph ML

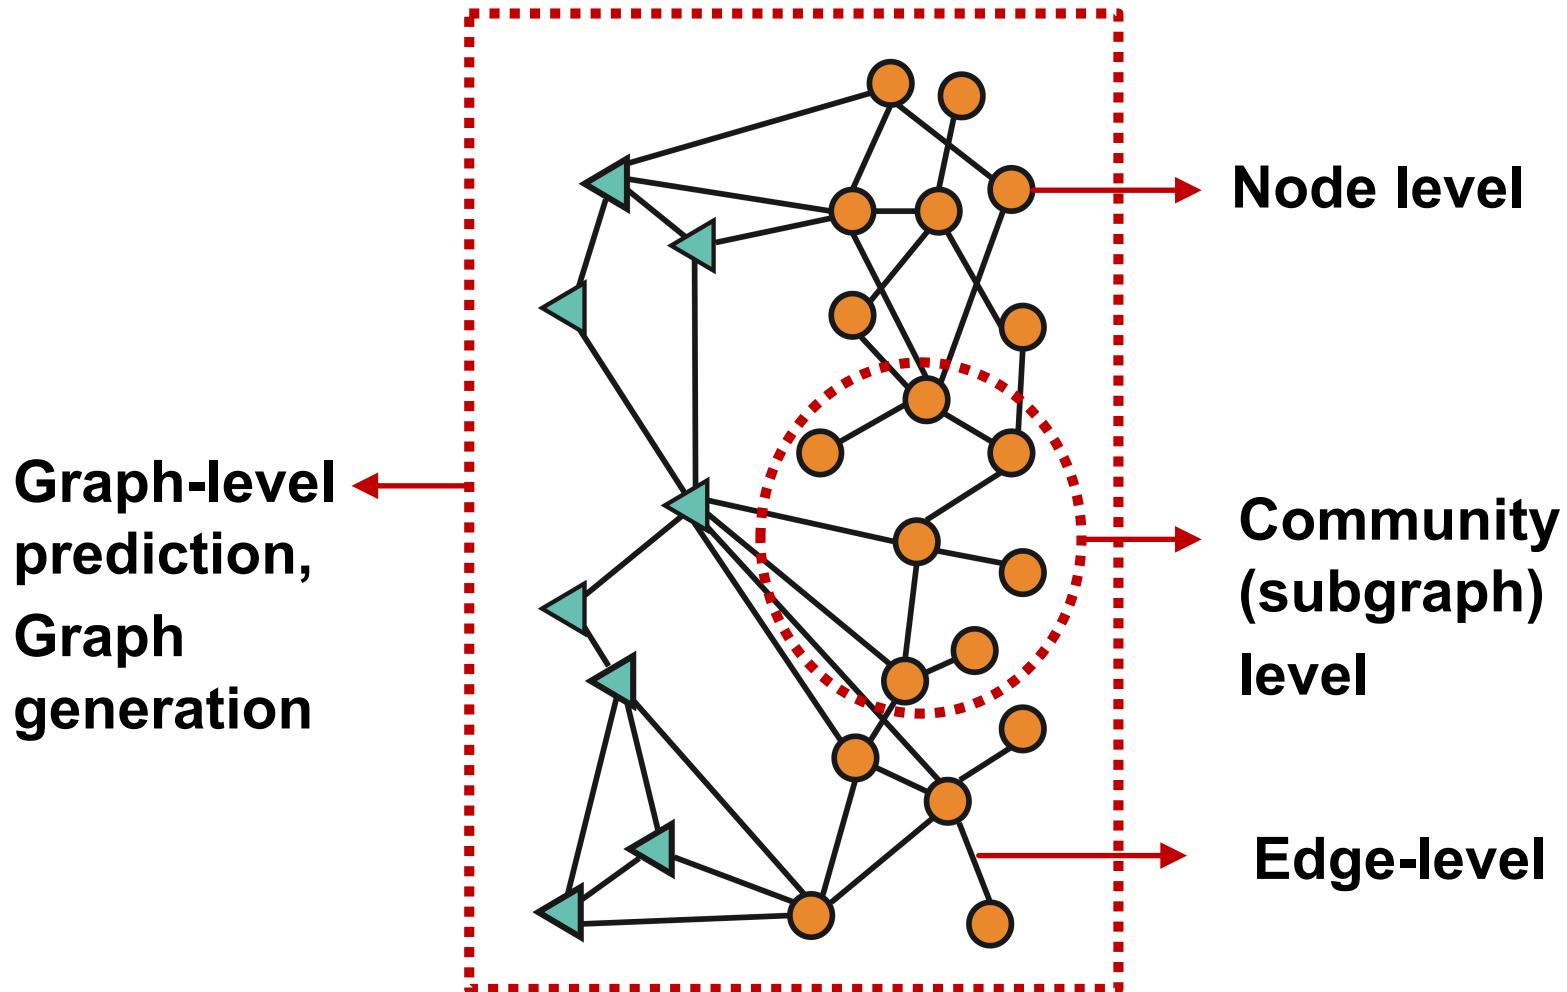

CS224W: Machine Learning with Graphs

Jure Leskovec, Stanford University

<http://cs224w.stanford.edu>

Different Types of Tasks

Classic Graph ML Tasks

- **Node classification:** Predict a property of a node
 - **Example:** Categorize online users / items
- **Link prediction:** Predict whether there are missing links between two nodes
 - **Example:** Knowledge graph completion
- **Graph classification:** Categorize different graphs
 - **Example:** Molecule property prediction
- **Clustering:** Detect if nodes form a community
 - **Example:** Social circle detection
- **Other tasks:**
 - **Graph generation:** Drug discovery
 - **Graph evolution:** Physical simulation

Classic Graph ML Tasks

- **Node classification:** Predict a property of a node
 - Example: Categorize online users / items
- **Link prediction:** Predict whether there are missing links
 - Example: Predict if two users are friends
- **Graph classification:** Predict a property of a graph
 - Example: Predict if a graph is social or not
- **Clustering:** Group nodes into clusters
 - Example: Group users by interests
- **Others:**
 - **Graph generation:** Drug discovery
 - **Graph evolution:** Physical simulation

These Graph ML tasks lead to high-impact applications!

Example of Node-level ML Tasks

Example (1): Protein Folding

A protein chain acquires its native 3D structure

Every protein is made up of a sequence of amino acids bonded together

These amino acids interact locally to form shapes like helices and sheets

These shapes fold up on larger scales to form the full three-dimensional protein structure

Proteins can interact with other proteins, performing functions such as signalling and transcribing DNA

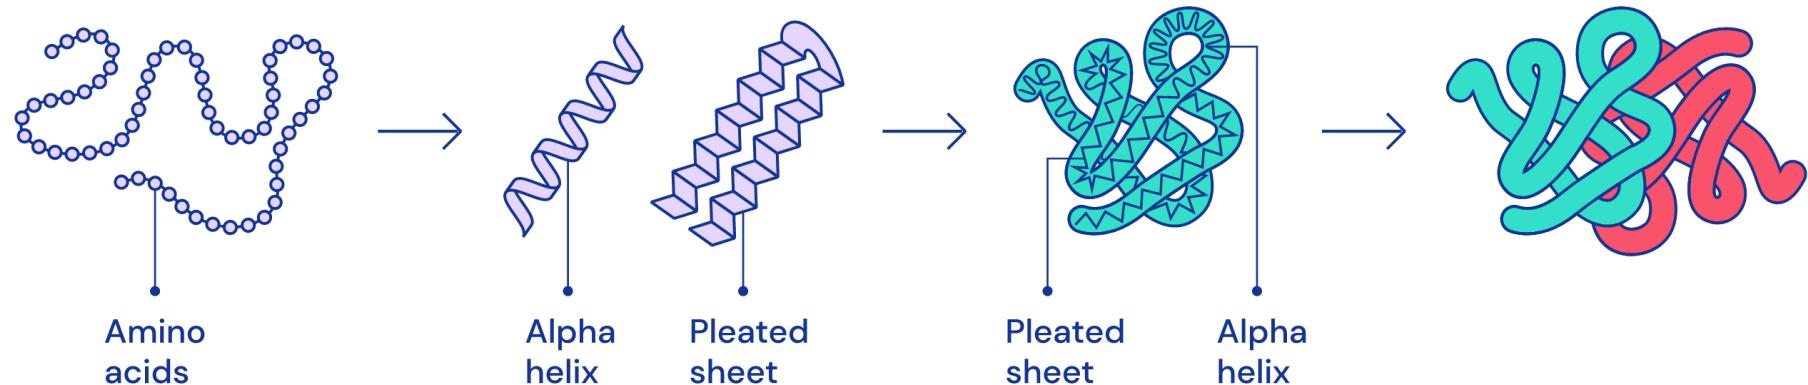

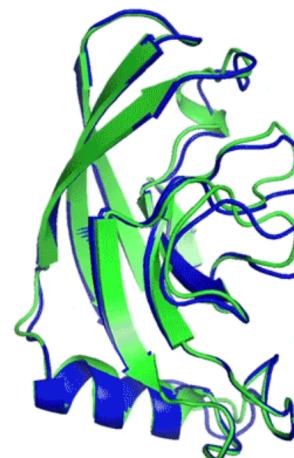

Image credit: [DeepMind](#)

The Protein Folding Problem

Computationally predict a protein's 3D structure
based solely on its amino acid sequence

T1037 / 6vr4
90.7 GDT
(RNA polymerase domain)

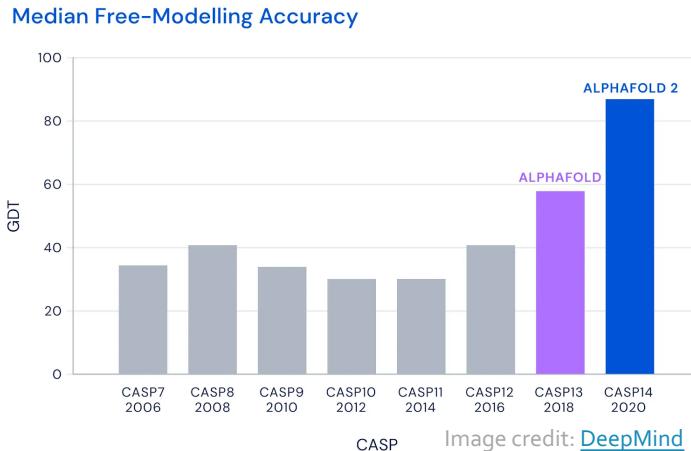

T1049 / 6y4f
93.3 GDT
(adhesin tip)

- Experimental result
- Computational prediction

AlphaFold: Impact

Topics

DeepMind's AlphaFold Is Close to Solving One of Biology's Greatest Challenges

By Shelly Fan - Dec 15, 2020 • 24,780

Image credit: [SingularityHub](#)

AlphaFold's AI could change the world of biological science as we know it

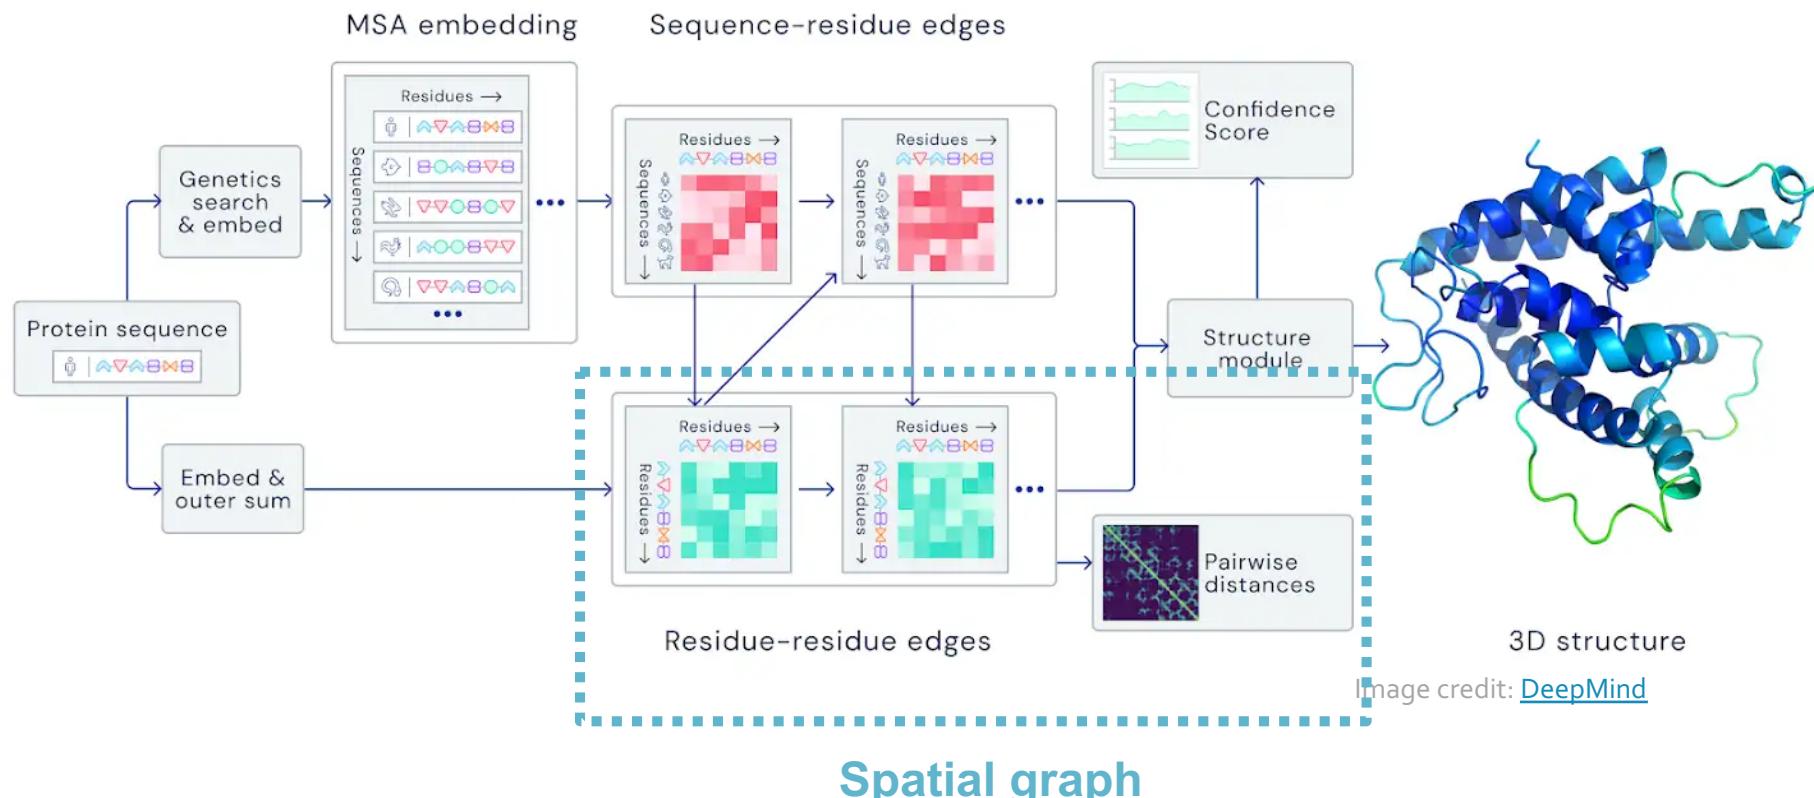

DeepMind's latest AI breakthrough can accurately predict the way proteins fold

Has Artificial Intelligence 'Solved' Biology's Protein-Folding Problem?

12-14-20
DeepMind's latest AI breakthrough could turbocharge drug discovery

AlphaFold: Solving Protein Folding

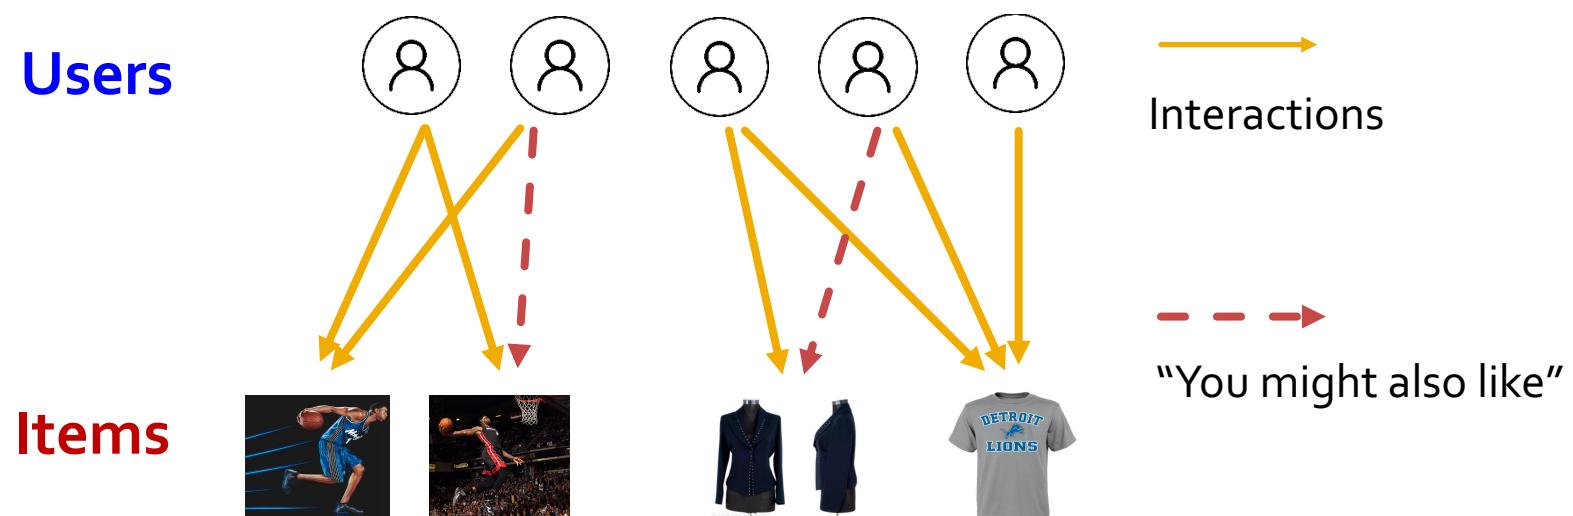

- Key idea: “Spatial graph”
 - Nodes: Amino acids in a protein sequence
 - Edges: Proximity between amino acids (residues)

Examples of Edge-level ML Tasks

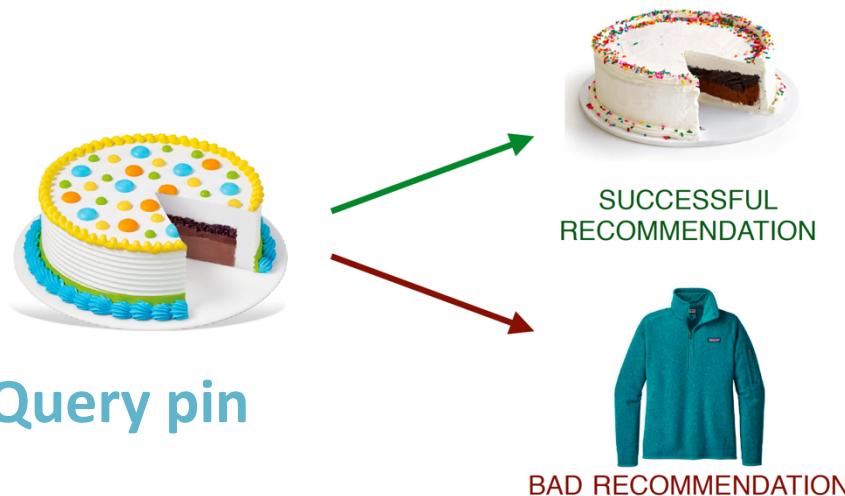

Example (2): Recommender Systems

- **Users interacts with items**
 - Watch movies, buy merchandise, listen to music
 - **Nodes:** Users and items
 - **Edges:** User-item interactions
- **Goal: Recommend items users might like**

PinSage: Graph-based Recommender

Task: Recommend related pins to users

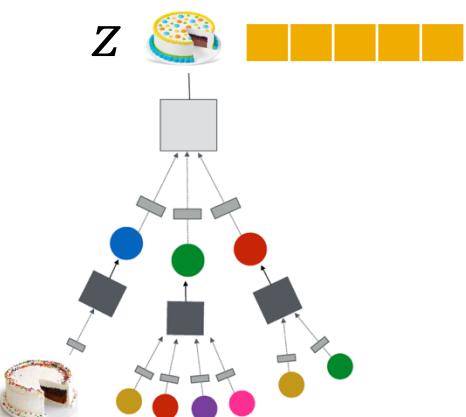

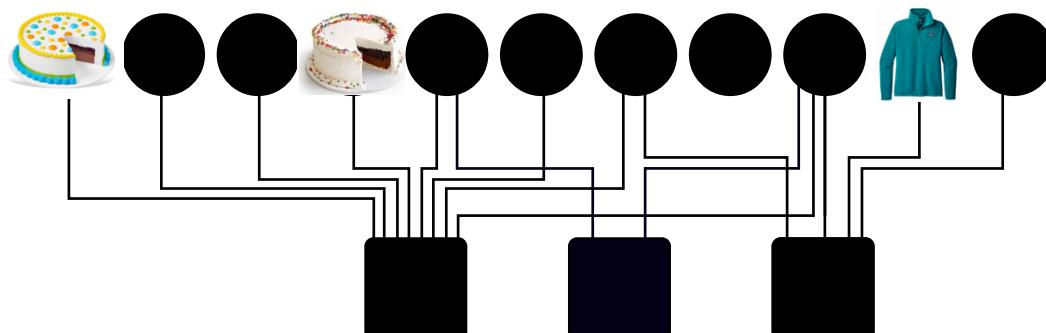

Task: Learn node embeddings z_i such that

$$d(z_{cake1}, z_{cake2}) < d(z_{cake1}, z_{sweater})$$

学到一种embedding使得相关点靠的更近

Predict whether two nodes in a graph are related

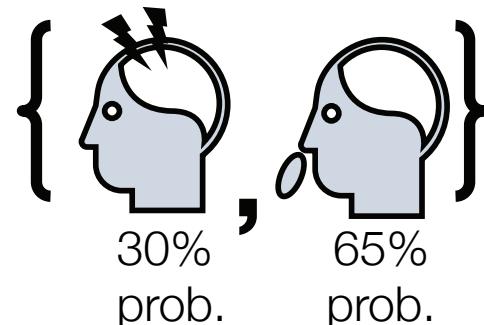

Example (3): Drug Side Effects

Many patients **take multiple drugs** to treat
complex or co-existing diseases:

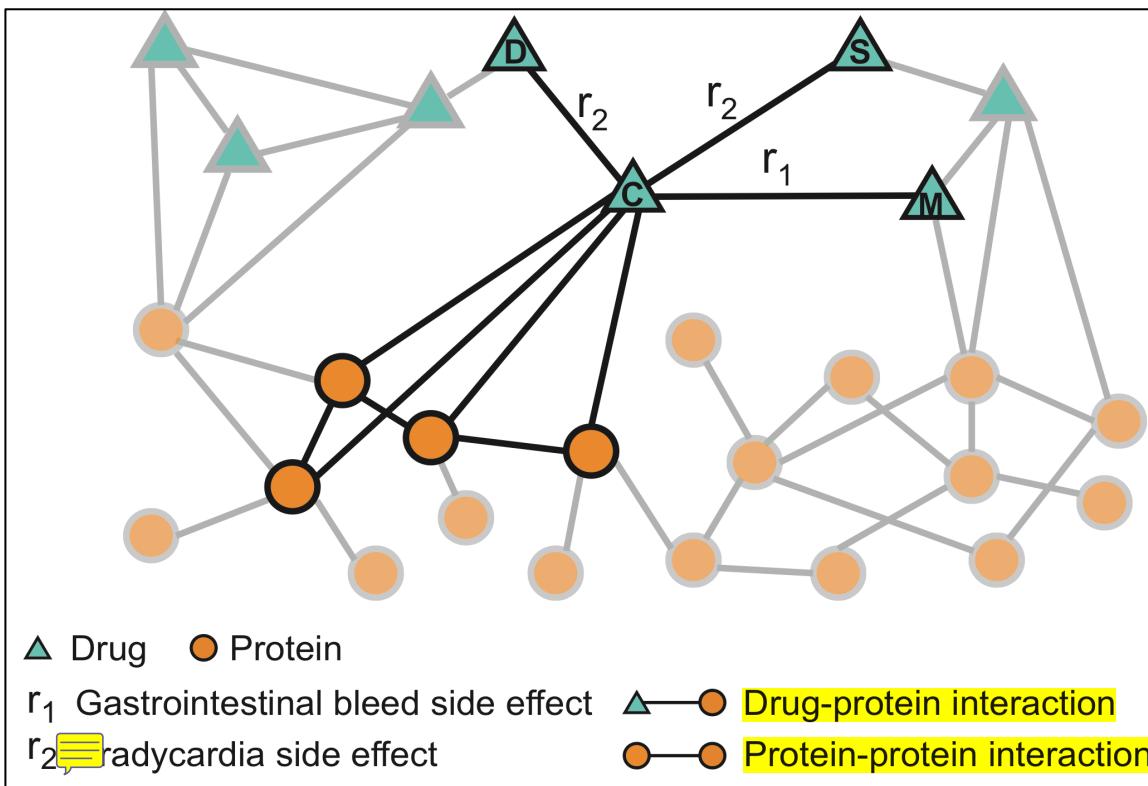

- 46% of people ages 70-79 take more than 5 drugs
- Many patients take more than 20 drugs to treat heart disease, depression, insomnia, etc.

**Task: Given a pair of drugs predict
adverse side effects**

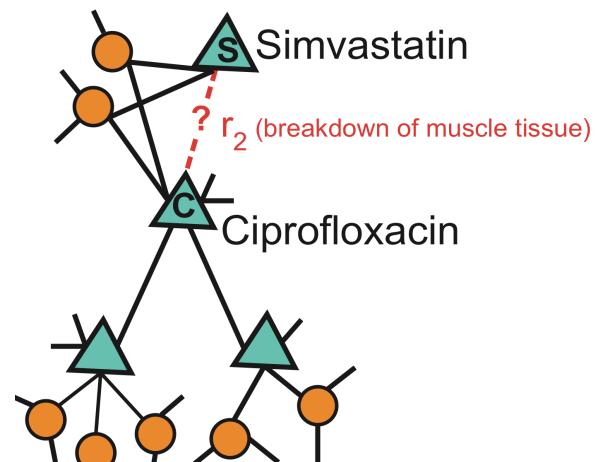

Biomedical Graph Link Prediction

- **Nodes:** Drugs & Proteins
- **Edges:** Interactions

Query: How likely will Simvastatin and Ciprofloxacin, when taken together, break down muscle tissue?

Results: *De novo* Predictions

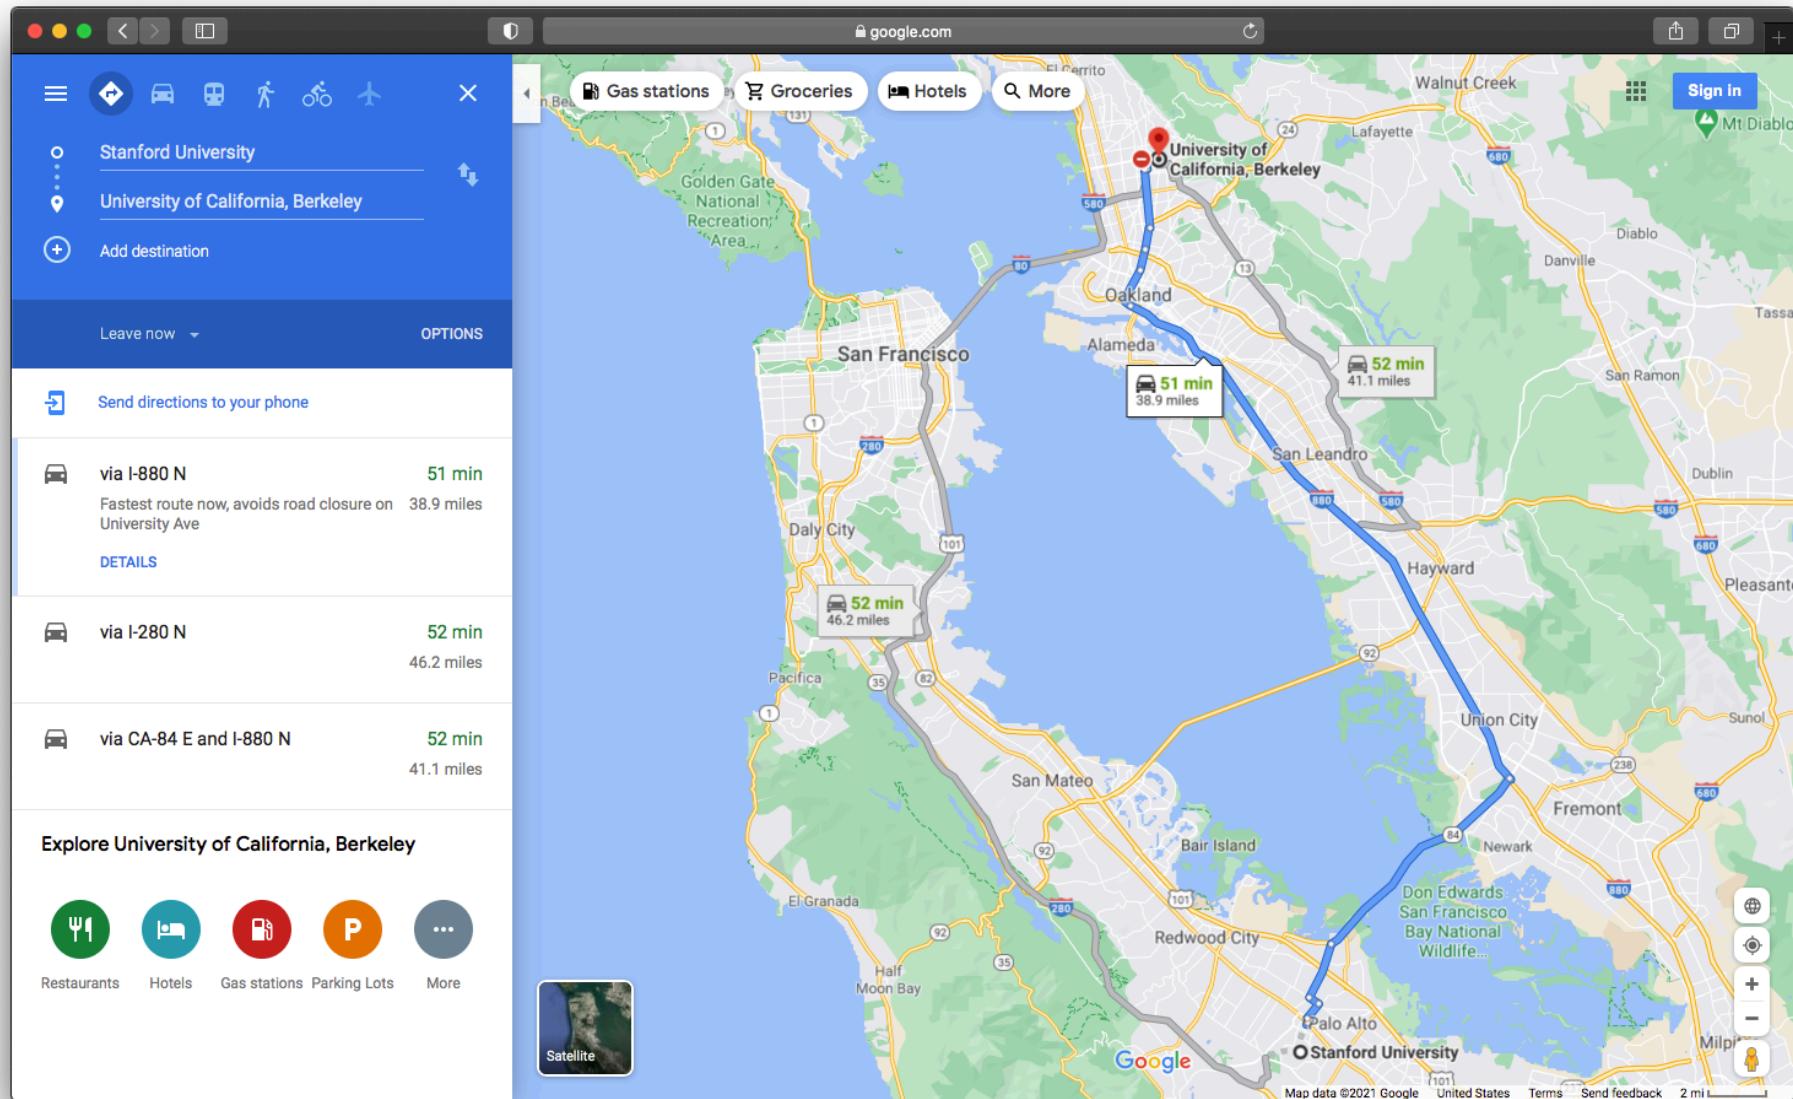

Rank	Drug c	Drug d	Side effect r	Evidence found
1	Pyrimethamine	Aliskiren	Sarcoma	Stage et al. 2015
2	Tigecycline	Bimatoprost	Autonomic neuropathy	
3	Omeprazole	Dacarbazine	Telangiectases	
4	Tolcapone	Pyrimethamine	Breast disorder	Bicker et al. 2017
5	Minoxidil	Paricalcitol	Cluster headache	
6	Omeprazole	Amoxicillin	Renal tubular acidosis	Russo et al. 2016
7	Anagrelide	Azelaic acid	Cerebral thrombosis	
8	Atorvastatin	Amlodipine	Muscle inflammation	Banakh et al. 2017
9	Aliskiren	Tioconazole	Breast inflammation	Parving et al. 2012
10	Estradiol	Nadolol	Endometriosis	

Case Report

**Severe Rhabdomyolysis due to Presumed Drug Interactions
between Atorvastatin with Amlodipine and Ticagrelor**

Examples of Subgraph-level ML Tasks

Example (4): Traffic Prediction

Road Network as a Graph

- **Nodes:** Road segments
- **Edges:** Connectivity between road segments

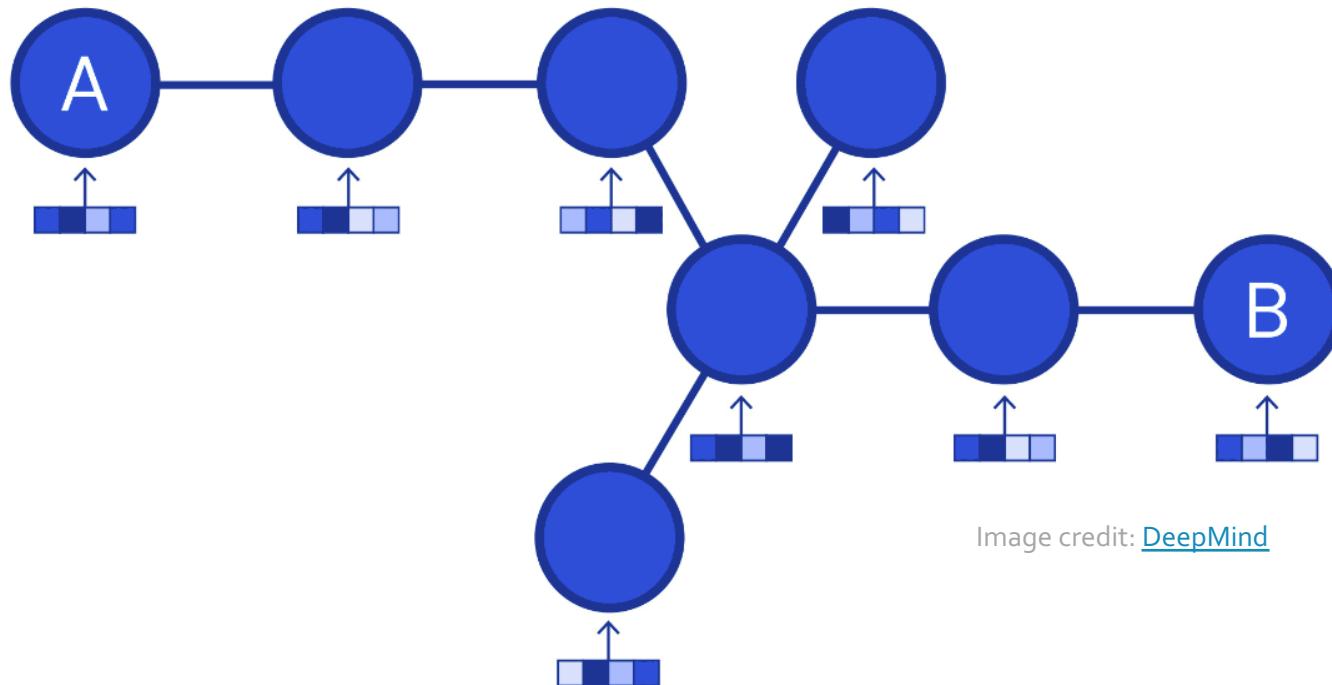

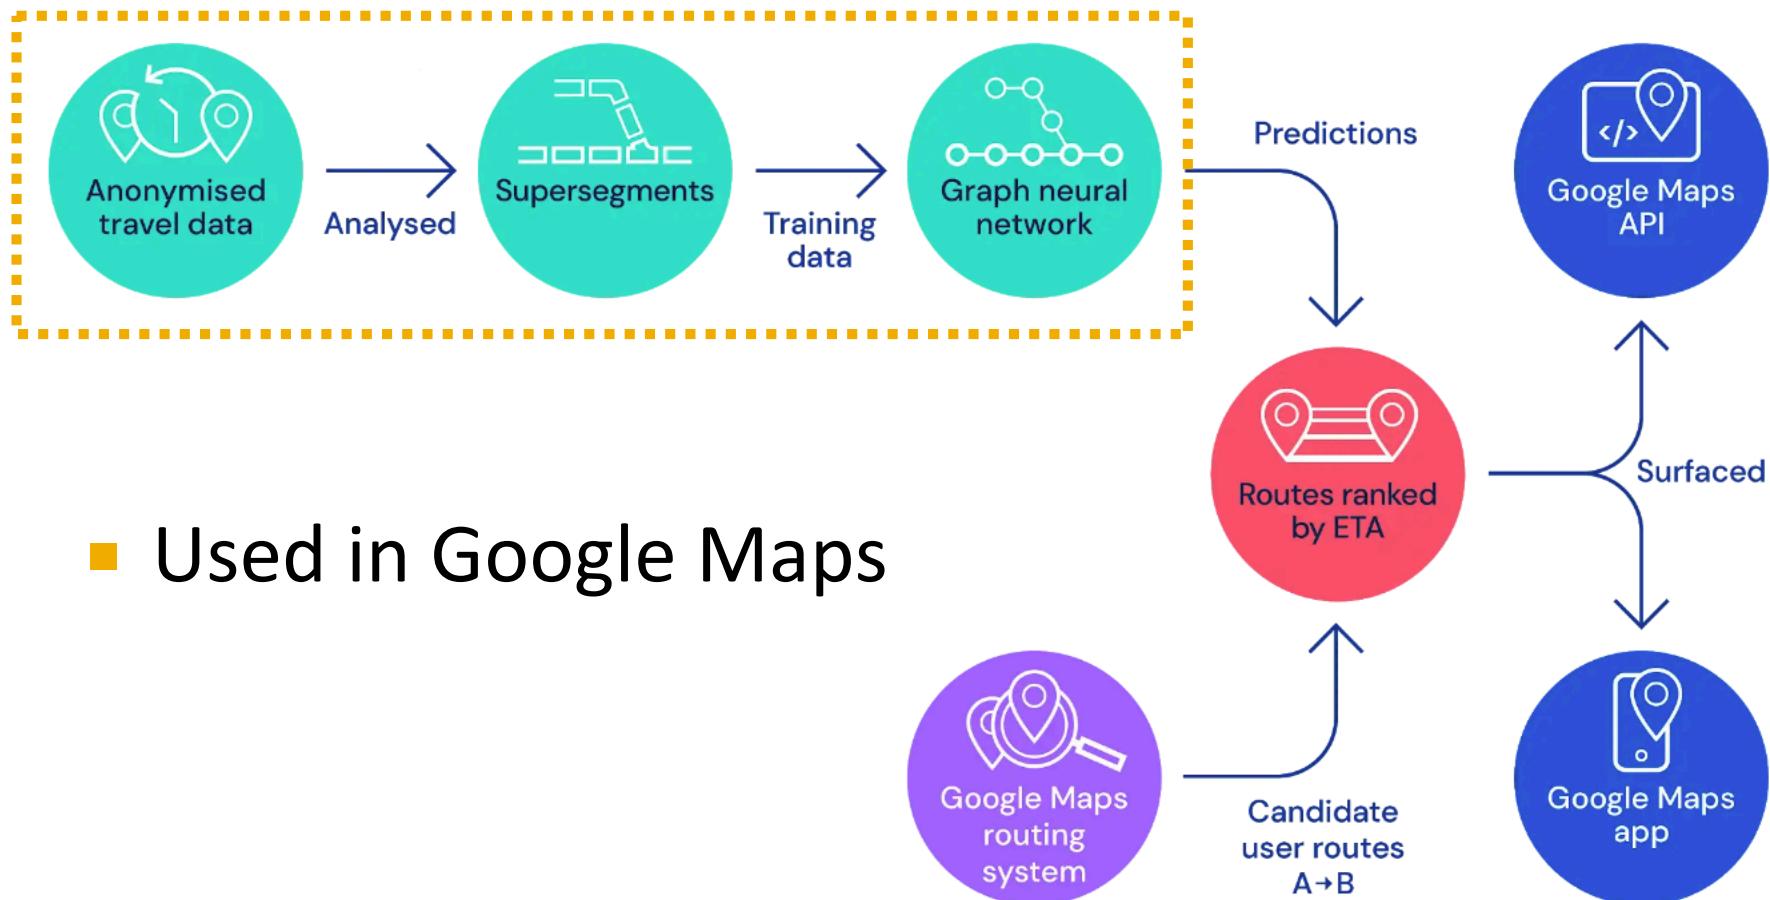

Image credit: [DeepMind](#)

Traffic Prediction via GNN

Predict via Graph Neural Networks

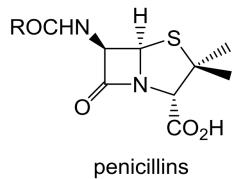

THE MODEL ARCHITECTURE FOR DETERMINING OPTIMAL ROUTES AND THEIR TRAVEL TIME.

Image credit: [DeepMind](#)

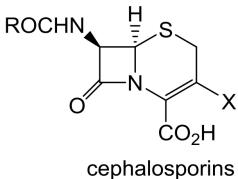

Examples of Graph-level ML Tasks

Example (5): Drug Discovery

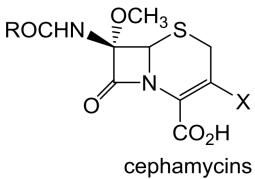

- Antibiotics are small molecular graphs
 - **Nodes:** Atoms
 - **Edges:** Chemical bonds

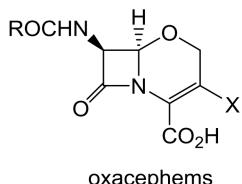

penicillins

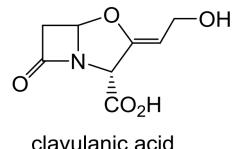

cephalosporins

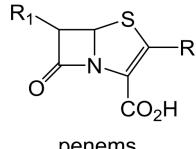

cephamycins

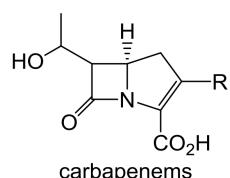

oxacephems

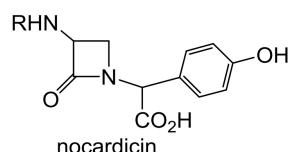

clavulanic acid
(an oxapenem)

penems

carbapenems

nocardicin

monobactams

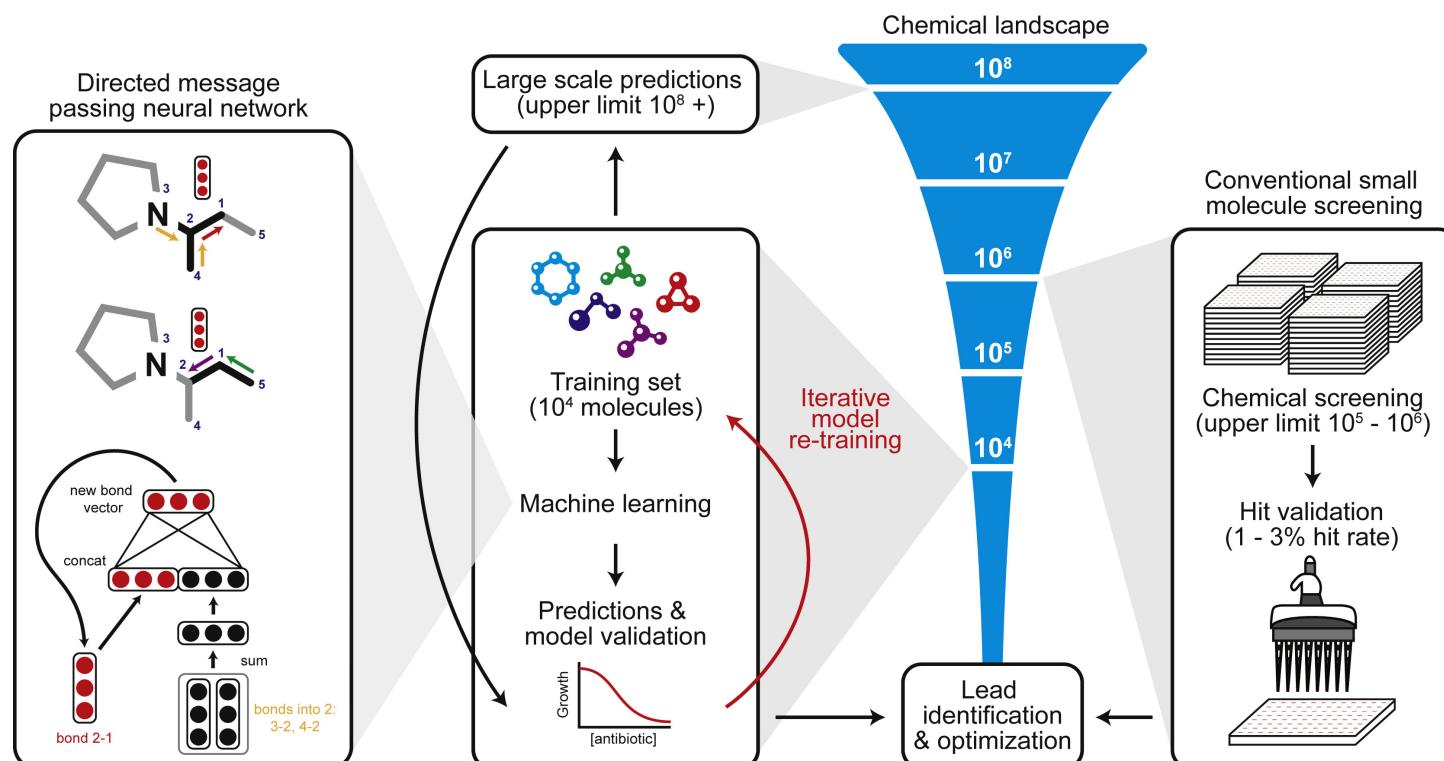

Konaklieva, Monika I. "Molecular targets of β-lactam-based antimicrobials: beyond the usual suspects." *Antibiotics* 3.2 (2014): 128-142.

Image credit: [CNN](#)

Deep Learning for Antibiotic Discovery

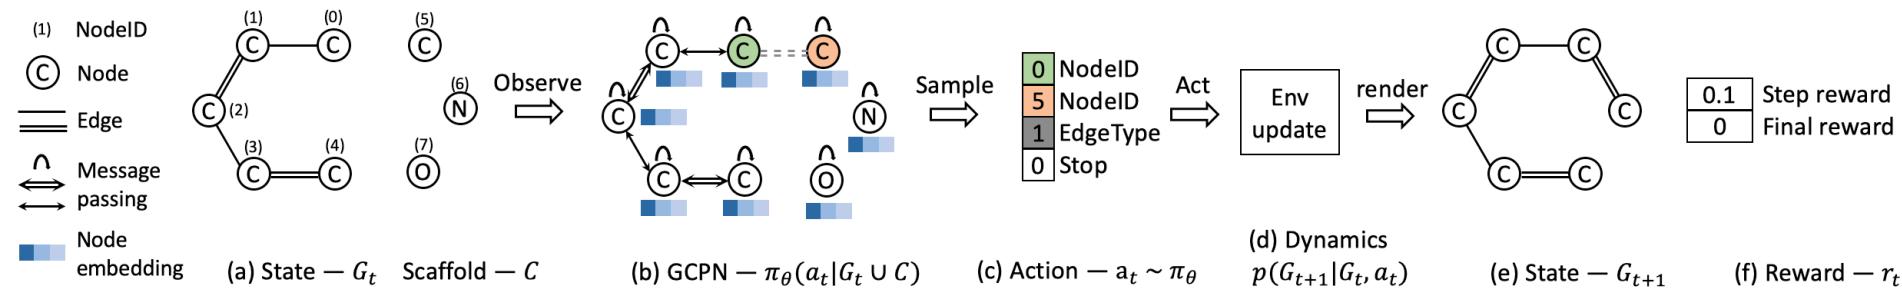

- A Graph Neural Network **graph classification model**
- Predict promising molecules from a pool of candidates

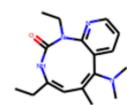

Stokes, Jonathan M., et al. "A deep learning approach to antibiotic discovery." Cell 180.4 (2020): 688-702.

Molecule Generation / Optimization

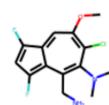

Graph generation: Generating novel molecules

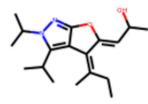

Use case 1: Generate novel molecules with high drug likeness

0.948

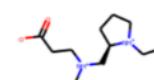

0.945

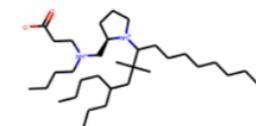

0.944

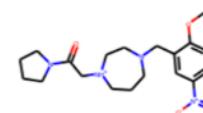

Use case 2: Optimize existing molecules to have desirable properties

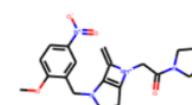

-8.32

-0.71

-5.55

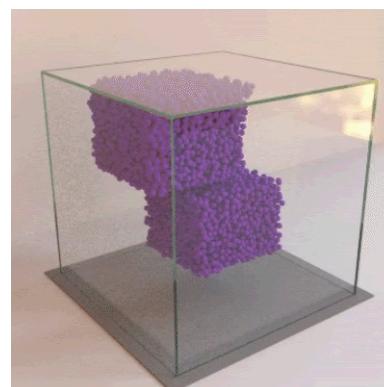

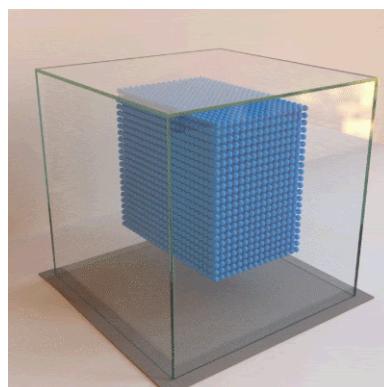

-1.78

Example (6): Physics Simulation

Physical simulation as a graph:

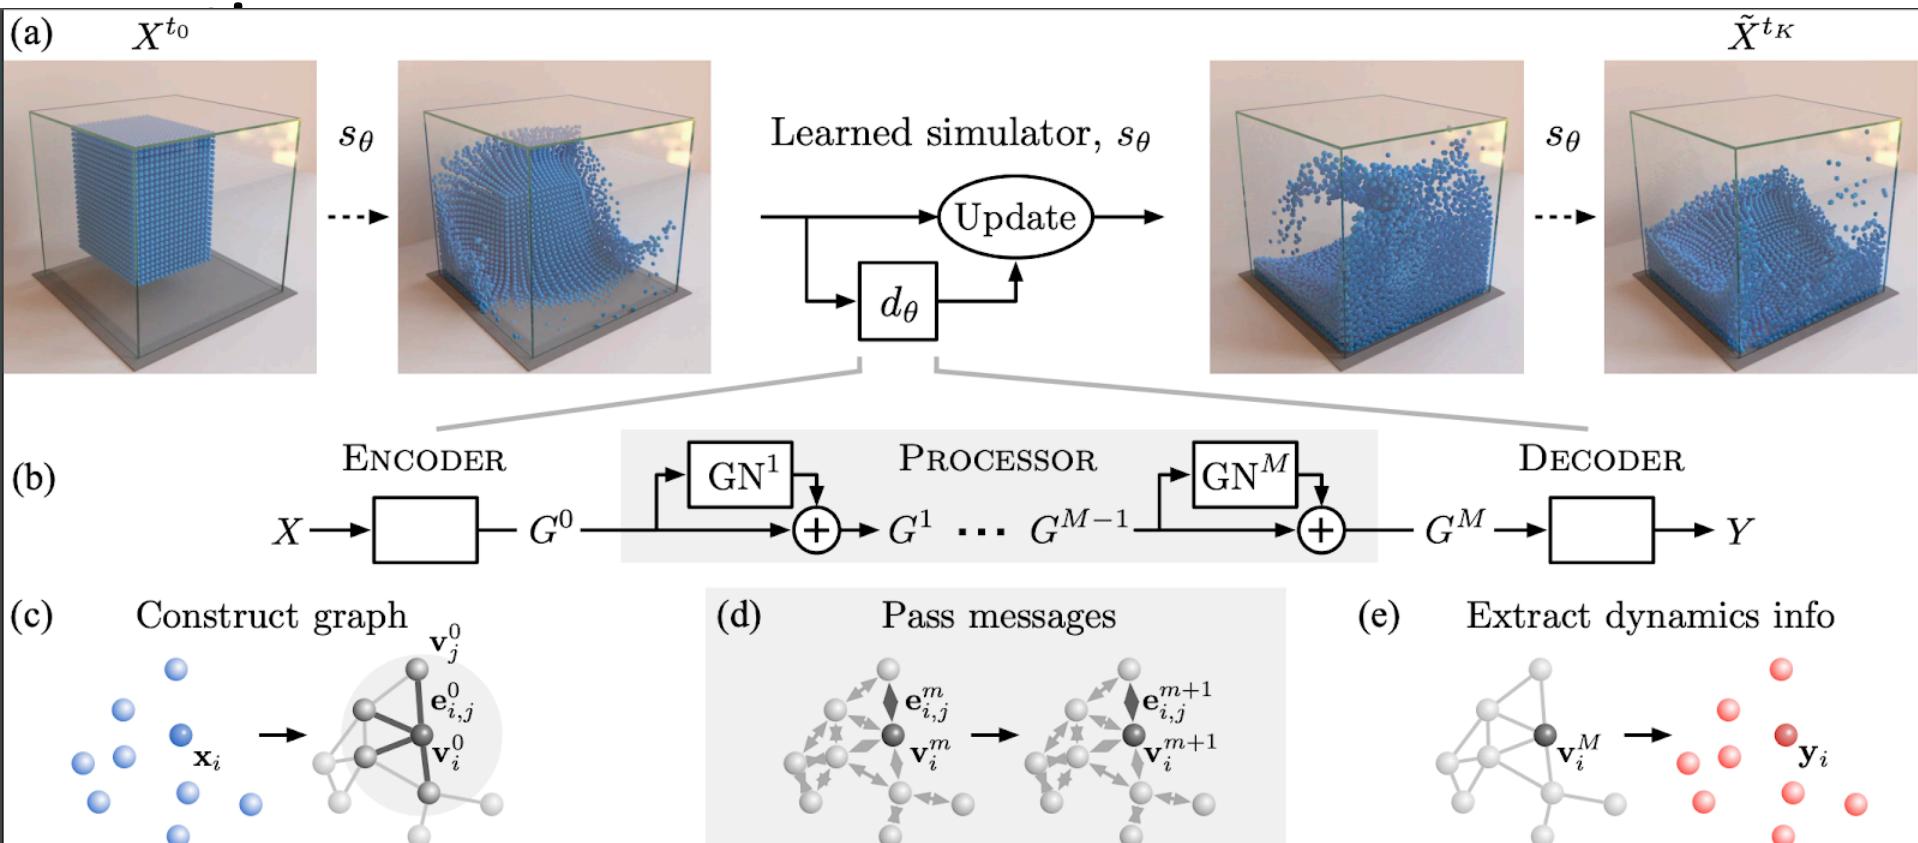

- **Nodes:** Particles
- **Edges:** Interaction between particles

Simulation Learning Framework

A graph evolution task:

- **Goal:** Predict how a graph will evolve over time

Stanford CS224W: Choice of Graph Representation

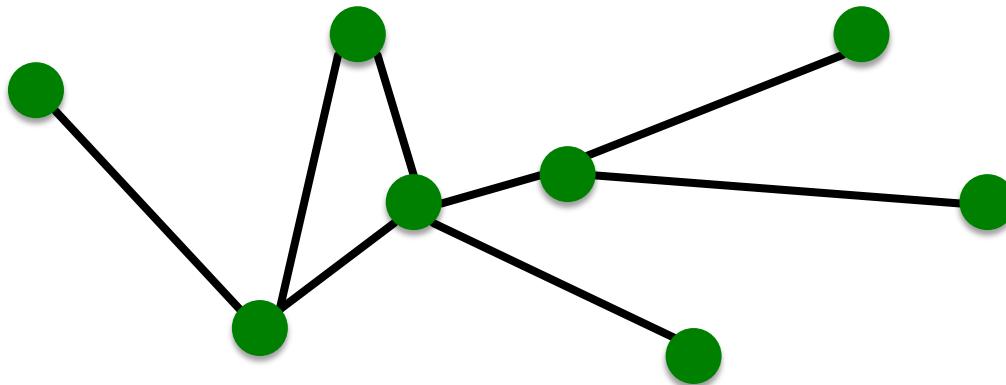

CS224W: Machine Learning with Graphs

Jure Leskovec, Stanford University

<http://cs224w.stanford.edu>

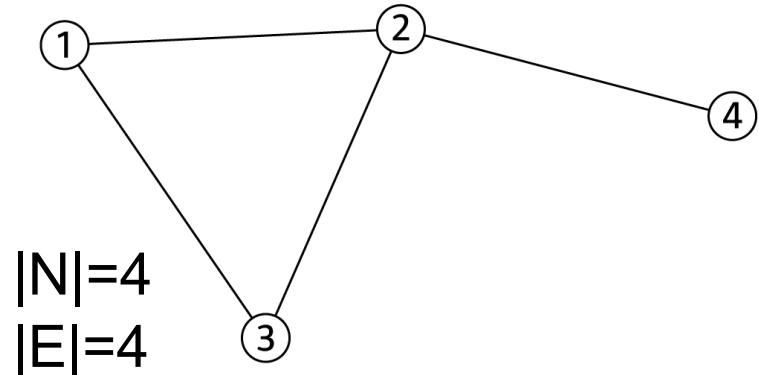

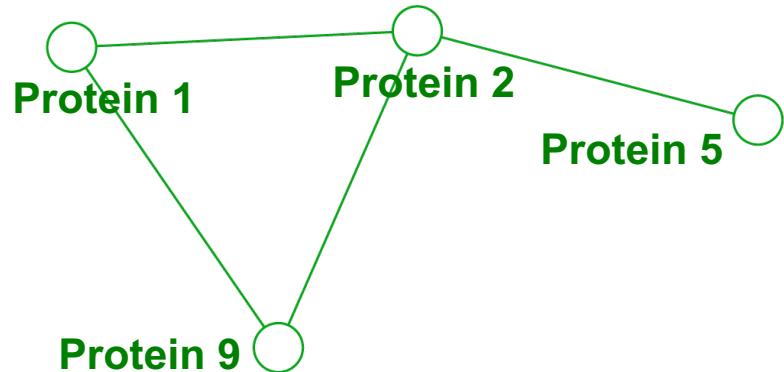

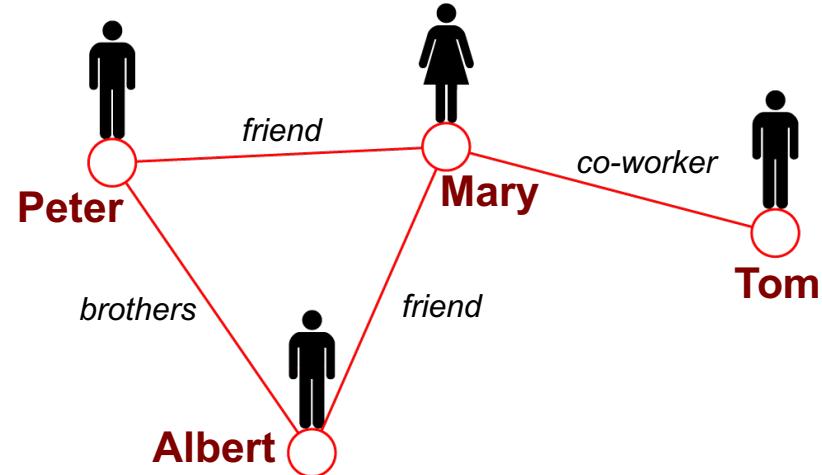

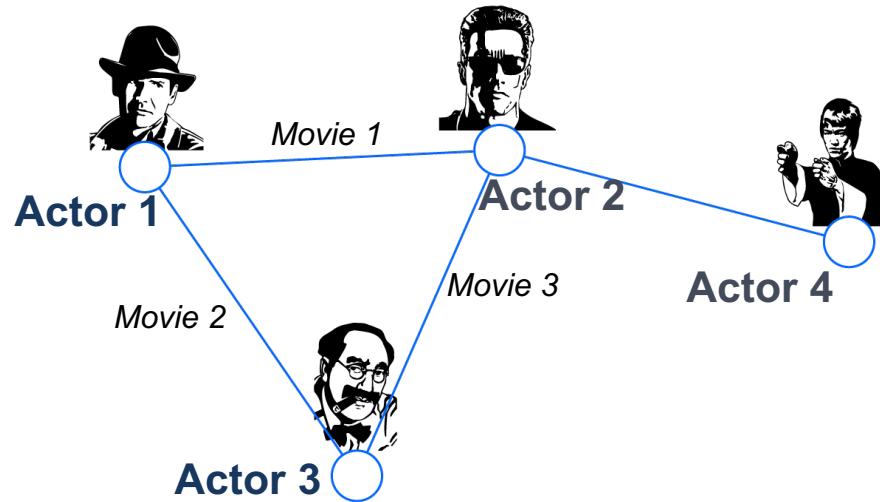

Components of a Network

- **Objects:** nodes, vertices entities N
- **Interactions:** links, edges E
- **System:** network, graph $G(N,E)$

Graphs: A Common Language

Choosing a Proper Representation

- If you connect individuals that work with each other, you will explore a **professional network**
- If you connect those that have a sexual relationship, you will be exploring **sexual networks**
- If you connect scientific papers that cite each other, you will be studying the **citation network**
- **If you connect all papers with the same word in the title, what will you be exploring?** It is a network, nevertheless

Image credit: [Euro Scientists](#)

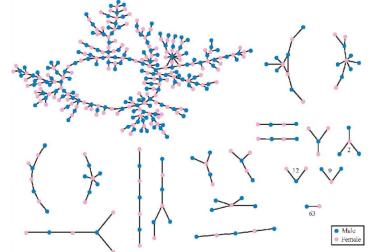

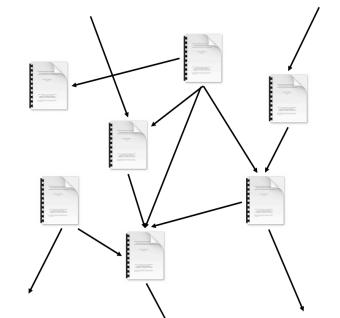

Image credit: [ResearchGate](#)

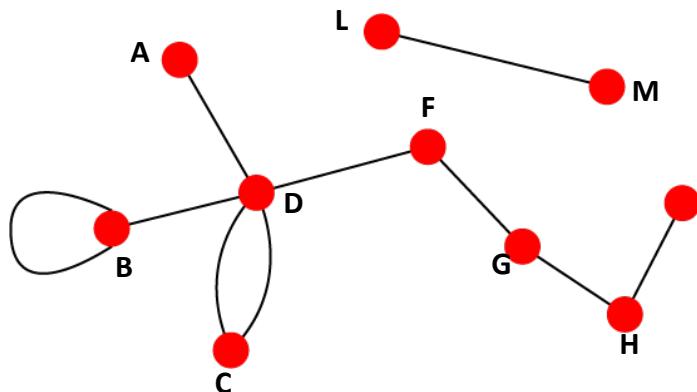

How do you define a graph?

- **How to build a graph:**
 - What are nodes?
 - What are edges?
- **Choice of the proper network representation of a given domain/problem determines our ability to use networks successfully:**
 - In some cases there is a unique, unambiguous representation
 - In other cases, the representation is by no means unique
 - The way you assign links will determine the nature of the question you can study

Directed vs. Undirected Graphs

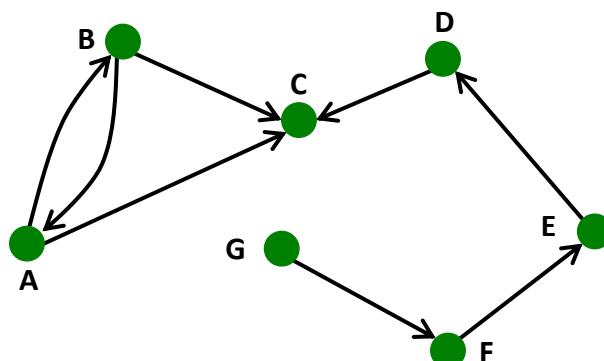

Undirected

- Links: undirected
(symmetrical, reciprocal)

Directed

- Links: directed
(arcs)

Examples:

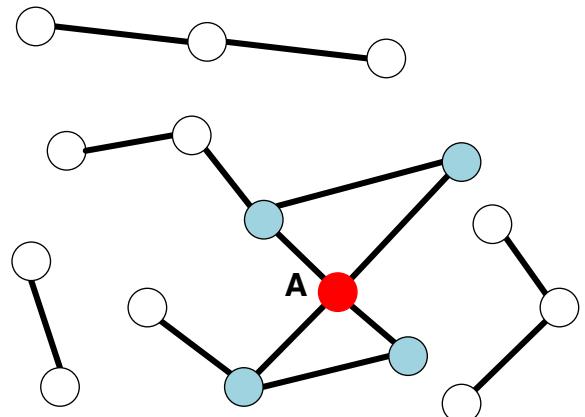

- Collaborations
- Friendship on Facebook

Examples:

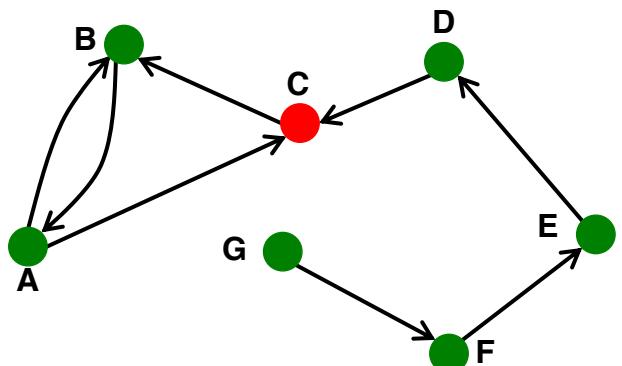

- Phone calls
- Following on Twitter

Node Degrees

Undirected

Directed

Source: Node with $k^{in} = 0$

Sink: Node with $k^{out} = 0$

Node degree, k_i : the number of edges adjacent to node i

$$k_A = 4$$

Avg. degree: $\bar{k} = \langle k \rangle = \frac{1}{N} \sum_{i=1}^N k_i = \frac{2E}{N}$

In directed networks we define an **in-degree** and **out-degree**. The (total) degree of a node is the sum of in- and out-degrees.

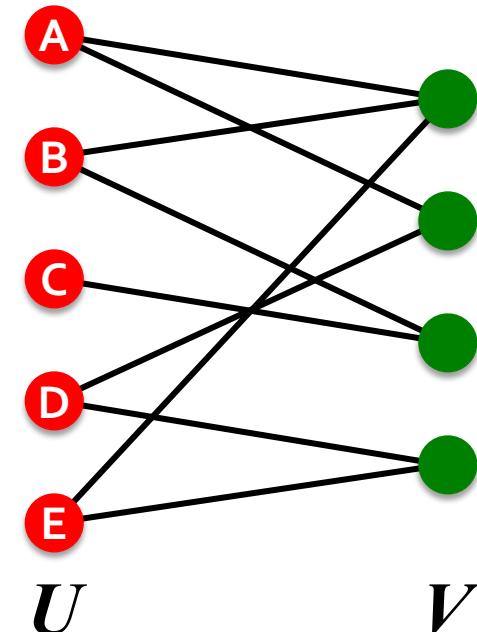

$$k_C^{in} = 2 \quad k_C^{out} = 1 \quad k_C = 3$$

$$\bar{k} = \frac{E}{N}$$

$$\bar{k}^{in} = \bar{k}^{out}$$

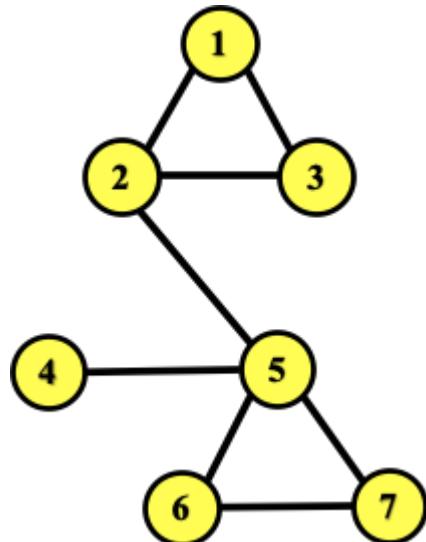

Bipartite Graph

- **Bipartite graph** is a graph whose nodes can be divided into two disjoint sets U and V such that every link connects a node in U to one in V ; that is, U and V are **independent sets**
- **Examples:**
 - Authors-to-Papers (they authored)
 - Actors-to-Movies (they appeared in)
 - Users-to-Movies (they rated)
 - Recipes-to-Ingredients (they contain)
- **“Folded” networks:**
 - Author collaboration networks
 - Movie co-rating networks

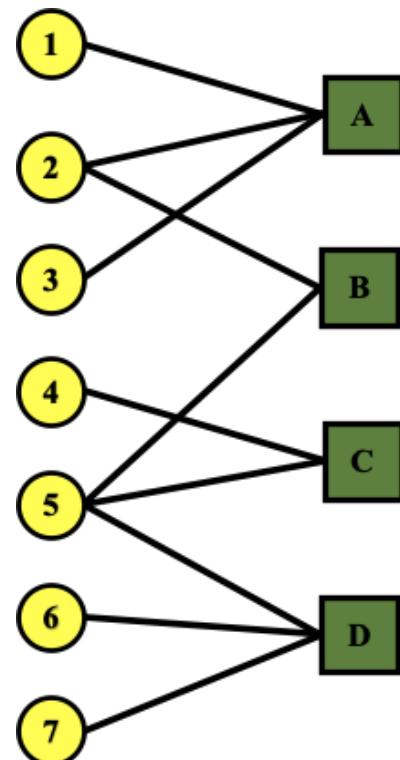

Folded/Projected Bipartite Graphs

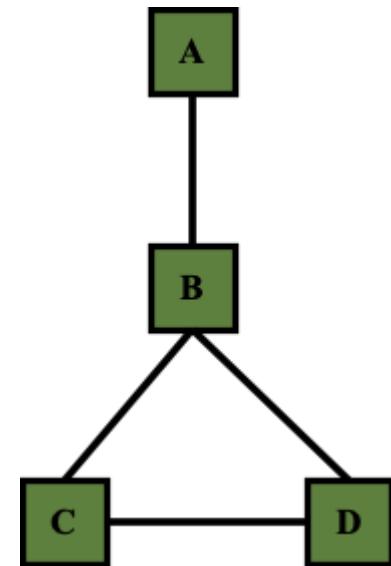

Projection U

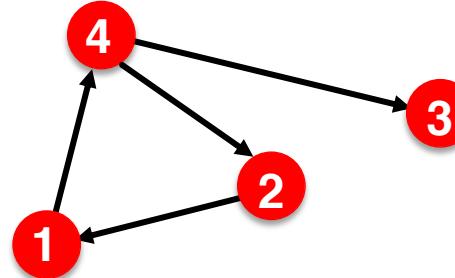

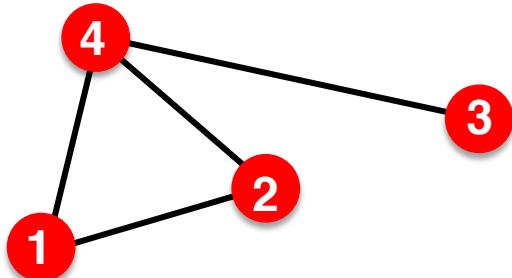

U V

Projection V

Representing Graphs: Adjacency Matrix

$A_{ij} = 1$ if there is a link from node i to node j

$A_{ij} = 0$ otherwise

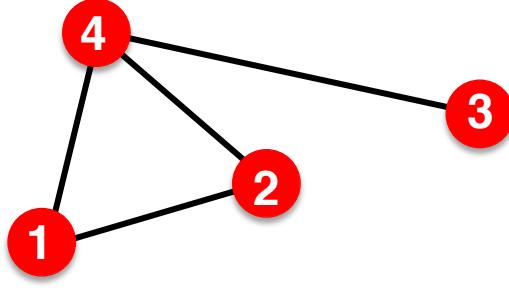

$$A = \begin{pmatrix} 0 & 1 & 0 & 1 \\ 1 & 0 & 0 & 1 \\ 0 & 0 & 0 & 1 \\ 1 & 1 & 1 & 0 \end{pmatrix}$$

$$A = \begin{pmatrix} 0 & 0 & 0 & 1 \\ 1 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 \\ 0 & 1 & 1 & 0 \end{pmatrix}$$

Note that for a directed graph (right) the matrix is not symmetric.

Adjacency Matrix

Undirected

$$A_{ij} = \begin{pmatrix} 0 & 1 & 0 & 1 \\ 1 & 0 & 1 & 0 \\ 0 & 1 & 0 & 1 \\ 1 & 0 & 1 & 0 \end{pmatrix}$$

$$A_{ij} = A_{ji}$$

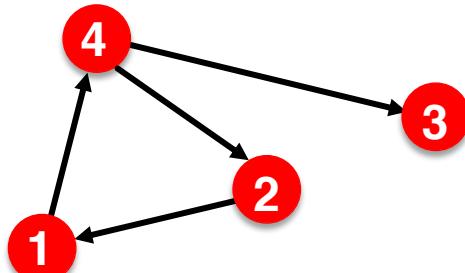

$$A_{ii} = 0$$

$$\boxed{\quad}$$

$$\boxed{\quad}$$

$$L = \frac{1}{2} \sum_{i=1}^N k_i = \frac{1}{2} \sum_{i,j} A_{ij}$$

Directed

$$A = \begin{pmatrix} 0 & 0 & 0 & 1 \\ 1 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 \\ 0 & 1 & 1 & 0 \end{pmatrix}$$

$$\boxed{k_i^{out} = \sum_{j=1}^N A_{ij}}$$

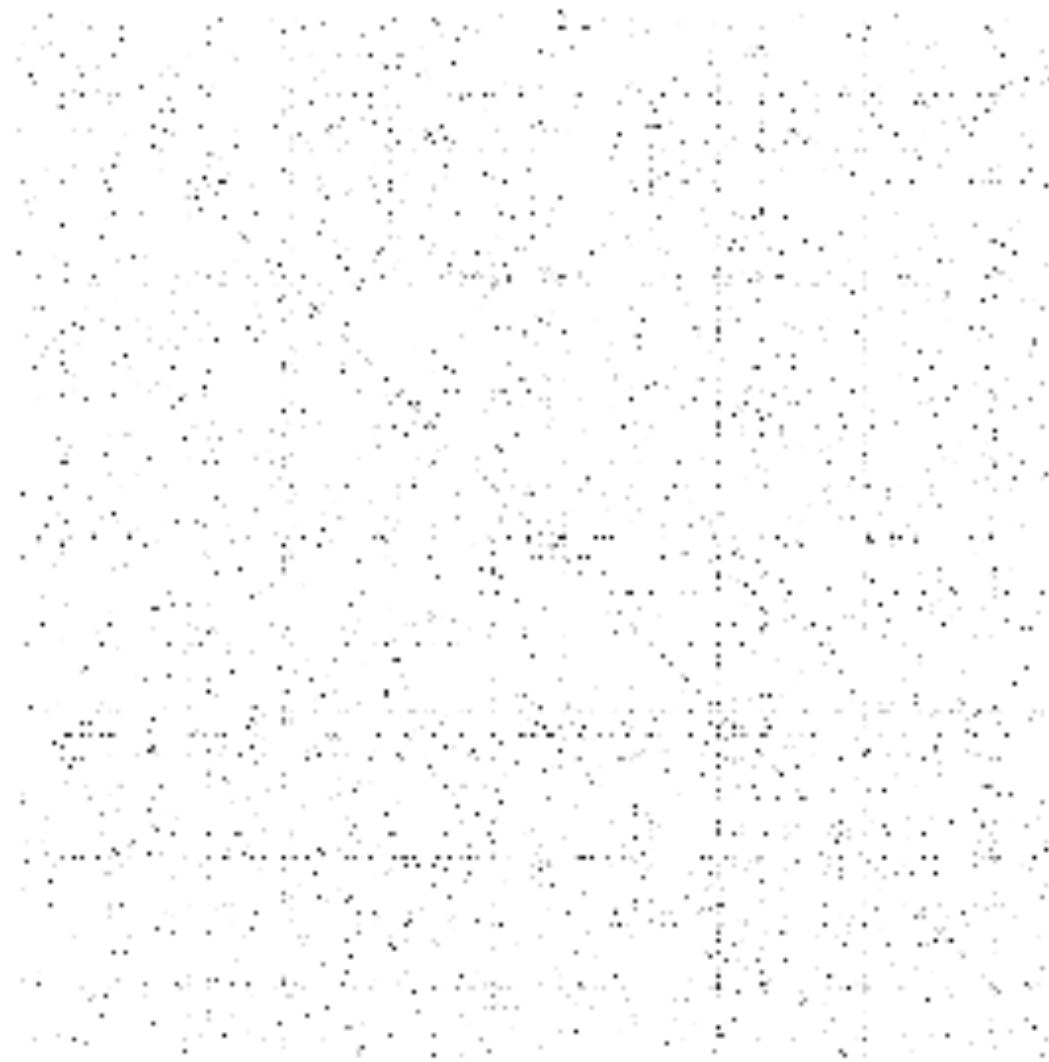

$$\boxed{in}$$

$$A_{ij} \neq A_{ji}$$

$$A_{ii} = 0$$

$$L = \sum_{i=1}^N k_i^{in} = \sum_{j=1}^N k_j^{out} = \sum_{i,j} A_{ij}$$

Adjacency Matrices are Sparse

Networks are Sparse Graphs

Most real-world networks are **sparse**

$$E \ll E_{\max} \text{ (or } k \ll N-1)$$

NETWORK	NODES	LINKS	DIRECTED/ UNDIRECTED	N	L	$\langle k \rangle$
Internet	Routers	Internet connections	Undirected	192,244	609,066	6.33
WWW	Webpages	Links	Directed	325,729	1,497,134	4.60
Power Grid	Power plants, transformers	Cables	Undirected	4,941	6,594	2.67
Phone Calls	Subscribers	Calls	Directed	36,595	91,826	2.51
Email	Email Addresses	Emails	Directed	57,194	103,731	1.81
Science Collaboration	Scientists	Co-authorship	Undirected	23,133	93,439	8.08
Actor Network	Actors	Co-acting	Undirected	702,388	29,397,908	83.71
Citation Network	Paper	Citations	Directed	449,673	4,689,479	10.43
E. Coli Metabolism	Metabolites	Chemical reactions	Directed	1,039	5,802	5.58
Protein Interactions	Proteins	Binding interactions	Undirected	2,018	2,930	2.90

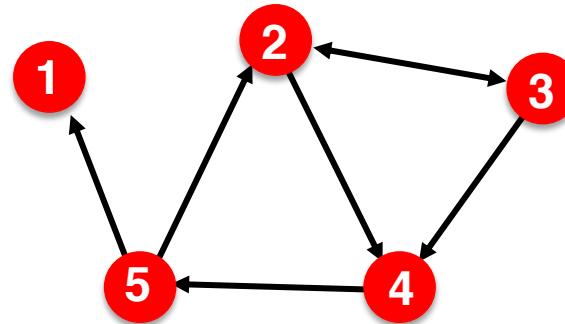

Consequence: Adjacency matrix is filled with zeros!

(Density of the matrix (E/N^2): WWW=1.51x10⁻⁵, MSN IM = 2.27x10⁻⁸)

Representing Graphs: Edge list

- Represent graph as a **list of edges**:

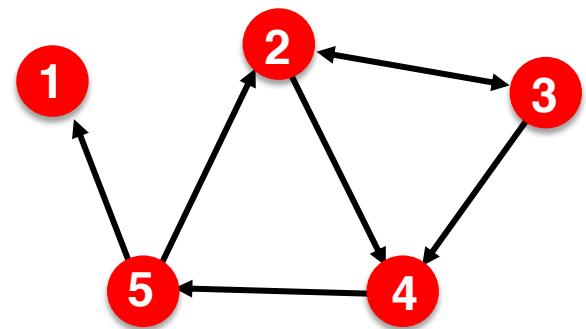

- (2, 3)
- (2, 4)
- (3, 2)
- (3, 4)
- (4, 5)
- (5, 2)
- (5, 1)

Representing Graphs: Adjacency list

■ **Adjacency list:**

- Easier to work with if network is
 - Large
 - Sparse
- Allows us to quickly retrieve all neighbors of a given node
 - 1:
 - 2: 3, 4
 - 3: 2, 4
 - 4: 5
 - 5: 1, 2

Node and Edge Attributes

Possible options:

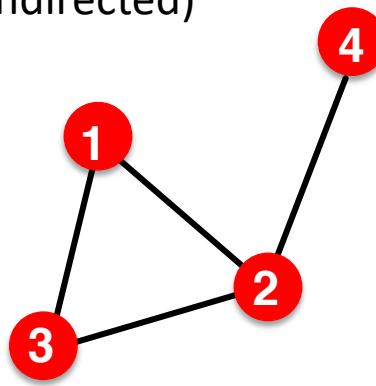

- Weight (*e.g.*, frequency of communication)
- Ranking (best friend, second best friend...)
- Type (friend, relative, co-worker)
- Sign: Friend vs. Foe, Trust vs. Distrust
- Properties depending on the structure of the rest of the graph: Number of common friends

node和edge包含了图的附加信息(attached matrix)

More Types of Graphs

■ Unweighted

(undirected)

$$A_{ij} = \begin{pmatrix} 0 & 1 & 1 & 0 \\ 1 & 0 & 1 & 1 \\ 1 & 1 & 0 & 0 \\ 0 & 1 & 0 & 0 \end{pmatrix}$$

$$A_{ii} = 0$$

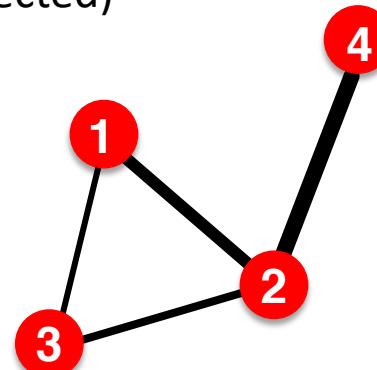

$$A_{ij} = A_{ji}$$

$$E = \frac{1}{2} \sum_{i,j=1}^N A_{ij} \quad \bar{k} = \frac{2E}{N}$$

Examples: Friendship, Hyperlink

■ Weighted

(undirected)

$$A_{ij} = \begin{pmatrix} 0 & 2 & 0.5 & 0 \\ 2 & 0 & 1 & 4 \\ 0.5 & 1 & 0 & 0 \\ 0 & 4 & 0 & 0 \end{pmatrix}$$

$$A_{ii} = 0$$

$$A_{ij} = A_{ji}$$

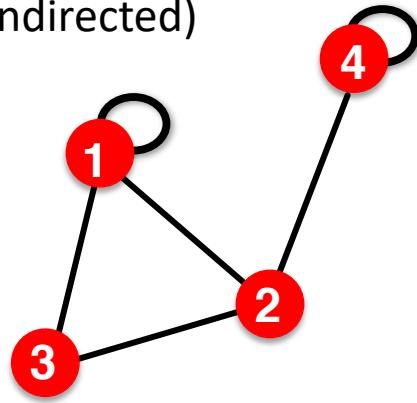

$$E = \frac{1}{2} \sum_{i,j=1}^N \text{nonzero}(A_{ij}) \quad \bar{k} = \frac{2E}{N}$$

Examples: Collaboration, Internet, Roads

More Types of Graphs

■ Self-edges (self-loops)

(undirected)

$$A_{ij} = \begin{pmatrix} \textcolor{brown}{\square} & 1 & 1 & 0 \\ 1 & 0 & 1 & 1 \\ 1 & 1 & 0 & 0 \\ 0 & 1 & 0 & \textcolor{brown}{\square} \end{pmatrix}$$

$$A_{ii} \neq 0$$

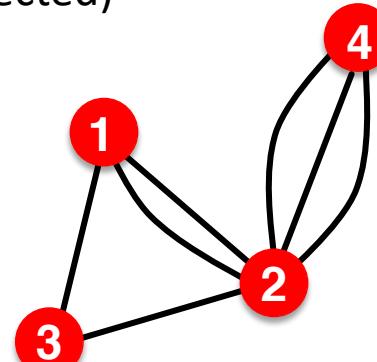

$$A_{ij} = A_{ji}$$

$$E = \frac{1}{2} \sum_{i,j=1, i \neq j}^N A_{ij} + \sum_{i=1}^N A_{ii}$$

Examples: Proteins, Hyperlinks

■ Multigraph

(undirected)

$$A_{ij} = \begin{pmatrix} 0 & \textcolor{brown}{\square} & 1 & 0 \\ \textcolor{brown}{\square} & 0 & 1 & \textcolor{brown}{\square} \\ 1 & 1 & 0 & 0 \\ 0 & \textcolor{brown}{\square} & 0 & 0 \end{pmatrix}$$

$$A_{ii} = 0$$

$$E = \frac{1}{2} \sum_{i,j=1}^N \text{nonzero}(A_{ij})$$

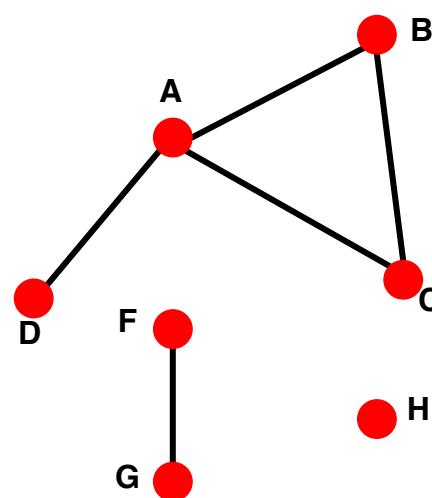

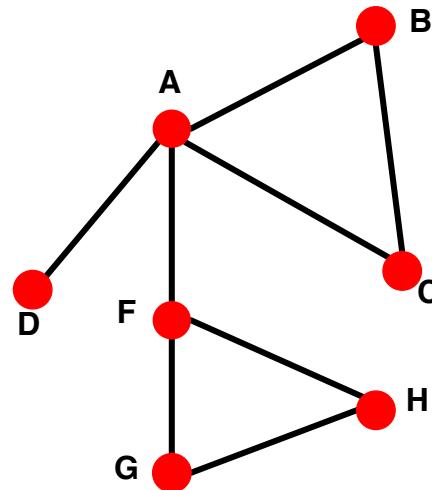

$$A_{ij} = A_{ji}$$

$$\bar{k} = \frac{2E}{N}$$

Examples: Communication, Collaboration

Connectivity of Undirected Graphs

- **Connected (undirected) graph:**
 - Any two vertices can be joined by a path
- A disconnected graph is made up by two or more connected components

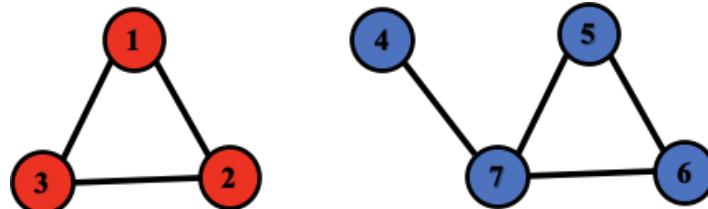

Largest Component:
Giant Component

Isolated node (node H)

Connectivity: Example

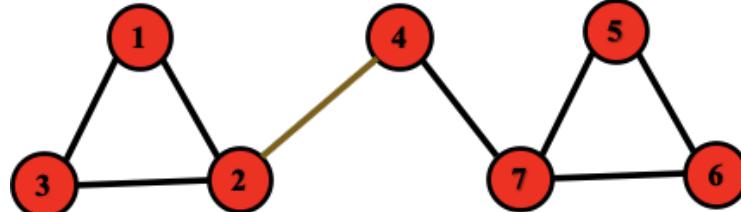

The adjacency matrix of a network with several components can be written in a block-diagonal form, so that nonzero elements are confined to squares, with all other elements being zero:

Disconnected

$$\begin{bmatrix} \begin{matrix} 0 & 1 & 1 \\ 1 & 0 & 1 \\ 1 & 1 & 0 \end{matrix} & \begin{matrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{matrix} \\ \begin{matrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{matrix} & \begin{matrix} 0 & 0 & 0 & 1 \\ 0 & 0 & 1 & 1 \\ 0 & 1 & 0 & 1 \\ 1 & 1 & 1 & 0 \end{matrix} \end{bmatrix}$$

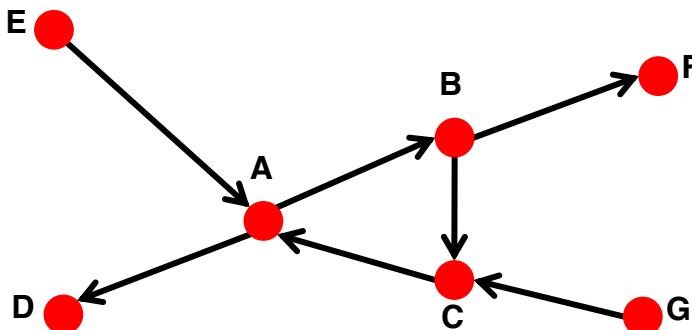

Connected

$$\begin{bmatrix} \begin{matrix} 0 & 1 & 1 \\ 1 & 0 & 1 \\ 1 & 1 & 0 \end{matrix} & \begin{matrix} 0 & 0 & 0 \\ 1 & 0 & 0 \\ 0 & 0 & 0 \end{matrix} \\ \begin{matrix} 0 & 1 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{matrix} & \begin{matrix} 0 & 0 & 0 & 1 \\ 0 & 0 & 1 & 1 \\ 0 & 1 & 0 & 1 \\ 1 & 1 & 1 & 0 \end{matrix} \end{bmatrix}$$

Connectivity of Directed Graphs

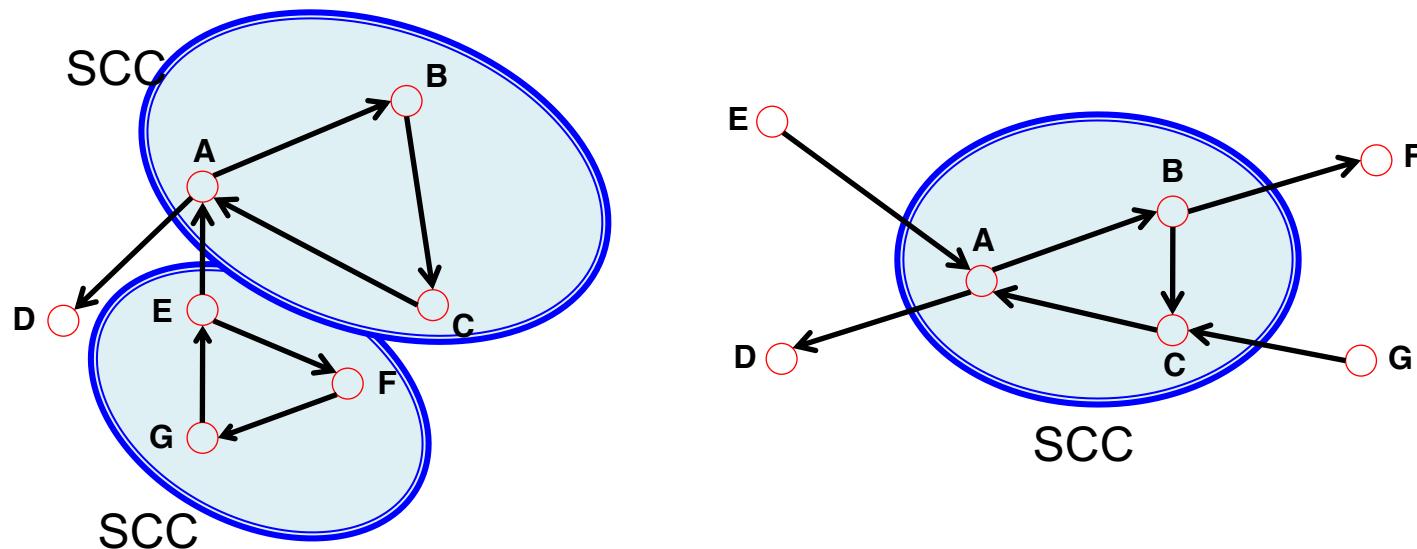

- **Strongly connected directed graph**
 - has a path from each node to every other node and vice versa (e.g., A-B path and B-A path)
- **Weakly connected directed graph**
 - is connected if we disregard the edge directions

Graph on the left is connected but not strongly connected (e.g., there is no way to get from F to G by following the edge directions).

Connectivity of Directed Graphs

- Strongly connected components (SCCs) can be identified, but not every node is part of a nontrivial strongly connected component.

In-component: nodes that can reach the SCC,

Out-component: nodes that can be reached from the SCC.

Summary

- **Machine learning with Graphs**
 - Applications and use cases
- **Different types of tasks:**
 - Node level
 - Edge level
 - Graph level
- **Choice of a graph representation:**
 - Directed, undirected, bipartite, weighted, adjacency matrix
